## Executive Summary

This document constitutes the initial version of the **Data Management Plan (DMP)** and has been elaborated as a deliverable (D6.2) in the framework of the MainstreamBIO project. MainstreamBIO sets out to get small-scale bio-based solutions into mainstream practice across rural Europe, providing a broader range of rural actors with the opportunity to engage in and speed up the development of the bioeconomy. Under this light, MainstreamBIO entails several activities within its framework which involve the collection, production and/or processing of data, with a view to generating meaningful insights that will feed into the project and fuel the co-creation of sustainable business models and the up-take of small-scale bio-based solutions.

In this context, the initial version of the project's DMP sets out the overall methodological principles pertaining to the management of the data that will be collected, generated and / or re-used in the framework of MainstreamBIO, safeguarding sound and ethical data management along the entire duration of the project. Moreover, it provides a first, yet still meaningful overview of MainstreamBIO's data, as identified in this early stage of the project, along with information on the methodology pertaining to their management as well as to making them Findable, Accessible, Interoperable and Re-usable (FAIR).

The initial version of the DMP is the first of the three versions of MainstreamBIO's Data Management Plan to be produced in the course of the project and will serve as living document (D6.2 Data Management Plan – Initial Version delivered in M3 will be updated to D6.3 Data Management Plan – Interim Version in M18 and ultimately fixed as D6.4 Data Management Plan – Final Version in M34). Along these lines, the DMP will be updated and further elaborated during the project to reflect an accurate, up-to-date and ultimately comprehensive plan for managing the data that will be collected, generated and / or re-used by the project across their entire life cycle, both during and after the completion of MainstreamBIO.

# 1. Introduction

The current document represents the initial version of the Data Management Plan (DMP) of MainstreamBIO, which has received funding from European Union’s Framework Programme for Research and Innovation Horizon Europe under Grant Agreement No 101059420.

MainstreamBIO aims at contributing towards bringing **small-scale bio-based solutions** into the mainstream across rural Europe. To achieve this, the project is set to greatly enhance cooperation between key bioeconomy stakeholders, resulting in sustainable business models pathways for bio-based innovations in rural areas. Along these lines, the project follows an integrated methodology to establish regional **multi-actor structures** for demand-driven innovation, and deliver a combination of communication materials, training programmes, events, decision support system and other practical digital tools packed in the **MainstreamBIO Toolkit**.

To this end, the **consortium** of MainstreamBIO brings together a complementary and interdisciplinary group of **10 partners across 9 different countries** within the EU and beyond, as presented in the table which follows.

*Table 1: MainstreamBIO Partners*

Partner Role*	Partner No	Partner Name	Partner Short Name	Country
CO	1	Q-PLAN INTERNATIONAL ADVISORS PC	Q-PLAN	Greece
BEN	2	MUNSTER TECHNOLOGICAL UNIVERSITY	MTU	Ireland
BEN	3	WAGENINGEN UNIVERSITY AND RESEARCH	WR	Netherlands
BEN	4	INSTITUTE OF SOIL SCIENCE AND PLANT CULTIVATION	IUNG	Poland
BEN	5	RISE PROCESSUM AB	PROC	Sweden
BEN	6	AGRAREN UNIVERSITY - PLOVDIV	AUP	Bulgaria
BEN	7	FBCD AS	FBCD	Denmark
BEN	8	EURIZON SL	INNV	Spain
BEN	9	DRAXIS ENVIRONMENTAL SA	DRAXIS	Greece
BEN	10	WHITE RESEARCH SRL	WHITE	Belgium

\* CO = Coordinator, BEN = Beneficiaries

All partners of MainstreamBIO’s consortium adhere to sound data management principles in order to ensure that the meaningful data collected, generated and / or re-used throughout the duration of

the project are well-managed, archived and preserved, in line with the structure and guidelines of the Horizon Europe Data Management Plan Template<sup>1</sup>.

Along these lines, this initial version of the DMP aims to achieve the following objectives:

- Describe the data management lifecycle for the data to be collected, generated and / or re-used in the framework of MainstreamBIO, serving as the key element of good data management.
- Outline the methodology employed to safeguard the sound management of the data collected, and/or generated as well as to make them Findable, Accessible, Interoperable and Re-usable (FAIR).
- Provide information on the data that will be collected, generated and/or re-used and the way in which it will be handled during and after the end of the project along with the standards applied to this end.
- Describe details on how the data will be made openly accessible and searchable to interested stakeholders as well as its curation and preservation.
- Address the management of any research outputs other than data in line with FAIR principles.
- Present information on the resources to be allocated so as to make data FAIR clearly identifying responsibilities pertaining to data management, while addressing data security and ethical aspects.

With the above in mind, this initial version of **the DMP is structured in 8 distinct chapters**, as follows:

- **Chapter 1** provides introductory information about the DMP, the context in which it has been elaborated as well as about its objectives and structure.
- **Chapter 2** presents a summary of the data to be collected/generated or re-used during the activities of MainstreamBIO including its purpose as well as its types and formats. Additionally, it outlines its origin, expected volume and the stakeholders that may find it useful.
- **Chapter 3** describes the methodology that is applied in MainstreamBIO in order to safeguard the effective management of data across their entire lifecycle, making it FAIR.
- **Chapter 4** presents the management of other research outputs that may be generated or re-used throughout MainstreamBIO and provides sufficient details on making them FAIR.
- **Chapter 5** estimates the resources required for making the project's data FAIR, while also identifying data management responsibilities.
- **Chapter 6** outlines the data security strategy applied within the context of MainstreamBIO along with the respective secure storage solutions employed.
- **Chapter 7** addresses ethical aspects as well as other relevant issues pertaining to the data collected/generated or re-used during the implementation of the project.
- **Chapter 8** concludes on the next steps foreseen in the framework of the project with respect to its data management plan.

---

<sup>1</sup> [https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/temp-form/report/data-management-plan\\_he\\_en.docx](https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/horizon/temp-form/report/data-management-plan_he_en.docx)

**Annexed** in the document are (i) the project's Privacy Policy (Annex I), the templates for the (ii) Informed Consent Form (Annex II) and (iii) the Data Subject Request Form (Annex III) as well as (iv) the Record of Processing Activities (Annex IV) which will be used during the implementation of the project's activities to ensure compliance with relevant applicable EU and national regulation(s).

**Note that the DMP is not a fixed document. It evolves during the lifespan of the project and will be further elaborated and updated at least twice more throughout the duration of MainstreamBIO (i.e., as D6.3 at M18 and D6.4 at M34). Additional ad hoc updates may also be realised (if necessary), in order to include new data, better detail and/or reflect changes in the methodology or other aspects relevant to their management (such as costs for making data FAIR, size of data, etc.), changes in consortium policies and plans or other potential external factors. Q-PLAN is responsible for the elaboration of the DMP and with the support of all partners will update and enrich it when required.**

## 2. Data Summary

MainstreamBIO will collect/generate or re-use meaningful non-sensitive data that do not fall into any special categories<sup>2</sup> of personal data as those are described within the General Data Protection Regulation<sup>3</sup> (GDPR). This data may be quantitative, qualitative or a blend of those in nature and will be analysed from a range of methodological perspectives with a view to producing insights that will successfully feed MainstreamBIO's activities, enable us to deliver evidence-based results and ultimately achieve the objectives of the project. With that in mind, the second chapter of the Data Management Plan (DMP) starts by explaining the purpose for which this data will be collected/generated and how it relates with MainstreamBIO. It proceeds by describing the different types and formats of this data as well as its origin and expected volume, before concluding with an overview of potential stakeholders for whom it may prove useful for re-use.

### 2.1 Purpose of data collection / generation or re-use and its relation to the objectives of the project

In order to successfully meet its objectives and ensure the production of evidence-based results, MainstreamBIO entails several activities during which data will be collected/generated or re-used. The purpose for which this data is collected/generated or re-used is interrelated with the objective of the activity during which it is produced.

In particular, these activities along with their objectives in the framework of MainstreamBIO are as follows:

- **Extensive mapping of relevant stakeholders and selection of the key ones**, within our focal regions, in order to set up the 7 MainstreamBIO multi-actor Innovation Platforms.
- **Analysis of needs, barriers and challenges to uptake and/or scale up small-scale bio-based solutions** in order to shed light on the context of farmers and rural communities and subsequently capture awareness levels and perceptions regarding the bioeconomy and bio-based solutions, products and nutrient circularity practices, amongst a broader group of stakeholders.
- **Analysis of attributes in the existing regional value chains**, to better understand the local product and service-based bio-based value chains.
- **Catalogue technologies, business models and social innovations for small-scale bio-based solutions**, built on already developed inventories and tools of bioeconomy projects ` toolkit.

---

<sup>2</sup> Special categories of personal data according to Regulation (EU) 2016/679 of the European Parliament (General Data Protection Regulation) include personal data revealing racial or ethnic origin, political opinions, religious or philosophical beliefs, or trade union membership, and the processing of genetic data, biometric data for the purpose of uniquely identifying a natural person, data concerning health or data concerning a natural person's sex life or sexual orientation.

<sup>3</sup> Regulation (EU) 2016/679 of the European parliament and of the council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC, <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32016R0679>

- **Collection of best practises related to nutrient recycling**, in order to identify and inventorise practical information on efficient and cost-effective nutrient recycling practices which will be utilized for the development of MainstreamBIO digital toolkit.
- **Organization of a co-creation workshop per MIP** aiming to co-define the service portfolio of each MIP and collect feedback on the functionalities of our toolkit.
- **Development of methodology for matching** available biomass and waste streams with market and technology information.
- **Development, upgrade and fine-tuning of the MainstreamBIO digital toolkit**, with a view to integrate knowledge in a multi-criteria decision model and to take account of regional focus groups' feedback and data collected from toolkit's practical use in the frame of MainstreamBIO's digital toolkit development and fine-tuning.
- **Identification and selection of suitable cases of multi-actor partnerships per MIP** with the aim to receive and benefit from the hands-on innovation support services across 2 rounds.
- **Organization of capacity building workshop**, in order to provide coaching to farmers, producers and local actors
- **Delivery of innovation support services**, in order to enhance the market uptake of small-scale bio-based solutions.
- **Organization of networking events and demo days**, to facilitate connections between actors and to inspire the engagement in bioeconomy.
- **Deployment of regional awareness raising and education campaigns per round**, aiming to utilize the campaigns' baseline specs for the development and implementation of action plans tailored to each MIP's needs and context.
- **Monitoring and evaluation of regional MIP**, with the aim to fuel the iterative improvement of the innovation support services and digital toolkit by deploying the findings and results.
- **Organization of regional scale up workshop per MIP**, in order to discuss experiences, gained through MainstreamBIO, between multi-actor partnerships and stakeholders and co-create sustainable business model pathways for bio-based solutions.
- **Organization of cross-regional learning workshops**, with a view to share good practices and transfer knowledge across regions.
- **Development and refinement of MainstreamBIO's Replication Guide and Toolkit and "Policy Insights" set**, with a view to offer practical replication guidelines, policy recommendations and tools for interested regional actors.
- **Production of EIP-AGRI abstracts and audio-visual material**, aiming to contribute to the Knowledge Centre for Bioeconomy and so to serve the practitioners with relevant information, recommendations and practices.
- **Monitoring and assessment of the dissemination, communication, stakeholder engagement and clustering activities** of MainstreamBIO, with a view to measuring their results and impact, fine-tune our strategy in this respect as well as fulfil the project's reporting requirements towards the Commission.
- **Sketching alternative business models for the operation of MIPs**, with the aim to further explore the best one(s), which will serve as basis to the elaboration of concise business plans for MIPs and toolkit.
- **Setting up the Advisory Board Experts**, in order to help the evaluation process of the MIPs with their expertise, during Project's implementation.
- **Project management and coordination**, with the aim to effectively fulfill the Project goals, deliver high quality project results, prepare Project meetings and ensure sound management of data.

The following section provides further details on the different types and formats of data collected/generated or re-used during the project's activities.

## 2.2 Types and formats of collected / generated or re-used data

MainstreamBIO is set to collect / generate or re-use data of various structures and formats. Along these lines, the data definition process used for this DMP is based on the source and the physical format of the data<sup>4</sup>. In particular, we define two main aspects: (i) the process under which the underlying data are created / captured which includes electronic texts documents, spreadsheets, questionnaires and transcripts, among others and (ii) the storage format of quantitative and qualitative data. Examples of this aspect include easily accessible formats, such as postscripts (e.g., pdf, xps, etc.), machine readable formats (xml, html, etc.), spreadsheets, (e.g., xls, csv, etc.), text documents (e.g., docx, rtf, etc.), compressed formats (e.g., rar, zip, etc.) or any other format required by the objectives and methodology of the activity within the framework of which it is produced.

Under this framework, special attention will be paid in using **open formats**<sup>5</sup> (such as csv, pdf, zip, etc.) and / or **machine-readable formats**<sup>6</sup> (such as xml, json, rdf, html, etc.) when possible, to enhance the **interoperability** and **re-use** of data. In doing so, we will be providing data that is **easily readable** and **freely usable in any software program** employed by third parties interested in utilizing the data.

The type and formats of the data collected / generated in the context of MainstreamBIO can be divided into **3 categories**, namely (i) data collected / generated by direct input methods; (ii) data collected / generated through use of the MainstreamBIO digital toolkit; and (iii) data collected / generated from dissemination, communication, stakeholder engagement and clustering activities, as described in the following subsections.

### 2.2.1 Data collected / generated through direct input methods

Direct input methods, under the scope of Mainstream, involve methodologies for collecting data through desk research and interactions between consortium partners and external stakeholders, with the latter providing data to the former. Along these lines, external stakeholders undertake the role of a data subject that is a natural person whose personal data is being processed<sup>7</sup>. In particular, the identification and selection of suitable data subjects are based on purposeful sampling according to which, external stakeholders are identified and selected by consortium partners based on their role within the rural value chains (e.g., producer, consumer, intermediary, etc.) and the objectives of the

---

<sup>4</sup> Jakobsson, U., Braukmann, R., Lundgren M., Expert Tour Guide on Data Management. Retrieved from <https://www.cessda.eu/Research-Infrastructure/Training/Expert-Tour-Guide-on-Data-Management/1.-Plan>.

<sup>5</sup> According to the [Open Data Handbook](#): “An open format is a file format with no restrictions, monetary or otherwise, placed upon its use and can be fully processed with at least one free/open-source software tool and it is not encumbered by any copyrights, patents, trademarks or other restrictions so that anyone may use it”.

<sup>6</sup> According to the [Open Data Handbook](#): “Machine readable formats are file formats that can be automatically read and processed by a computer. Machine-readable data must be structured data”.

<sup>7</sup> Regulation (EU) 2016/679 of the European parliament and of the council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC, <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32016R0679>.

respective activity for which data is collected. In this context, quantitative and qualitative data will be collected / generated during MainstreamBIO<sup>8</sup>:

- **Quantitative data** is numerical and acquired through counting or measuring. Examples of quantitative data are the yearly turnovers of a business, the hourly compensation of a worker, the number of SMEs in Europe, etc. This data may be represented by ordinal, interval or ratio scales and lend themselves to statistical manipulation.
- **Qualitative data**, sometimes referred to as categorical data, is data that can be arranged into categories based on physical traits, gender, colours or anything that does not have a number associated with it. Moreover, written documents, interviews, and various forms of in-field observation are all sources of qualitative data. Examples of qualitative data are the preferences of learning, skillsets, country of origin, etc.

Additional details with respect to the different types and formats of data that will be collected through direct input methods under the frame of MainstreamBIO are provided below.

### *Current status of relevant stakeholders*

The collection of the data will be employed in two steps for the needs of mapping the stakeholders' current status per MIP. In the first step a leverage of existing platforms, networks and initiatives of partners will take place so an extensive mapping can be operated. After that, the second step includes the selection and engagement of ten to twenty key stakeholders for the creation of a critical mass per MIP. Data collected during the first step are going to be both qualitative and quantitative, while in the second one data are expected to be mostly qualitative. The above data series will be recorded in the form of spreadsheets, with some additional notes in document form linked to the lists.

### *Farmers', rural communities', and consumers' needs, socio-economic context and framework conditions*

This data will be collected in two stages in the frame of the analysis of the needs, socio-economic and framework conditions faced by farmers and rural communities. The first stage will involve a desk study of at least 35 interviews conducted, per MIP, by the leading partner of the respective MIP. Both qualitative and quantitative data will be collected through interview questionnaires and guidelines during the first stage. The second stage is built on the above findings from interviews and includes a collection of data through an online survey amongst a broader group of stakeholders regarding the bioeconomy and bio-based solutions. Data collected in the second stage are mostly qualitative and stored in machine-readable formats. The knowledge gained and its analysis meets the farmers' needs, perceptions and socio-economic context and framework conditions.

### *Current status of value chains in Project focal regions*

Data will be collected through desk research for a preliminary mapping of the existing landscape of value chains in focal regions of the Project. Data regarding the attributes of value chains are expected to be mostly quantitative thus they will be recorded in the form of spreadsheets with possible additional document notes. In addition, a collection of key data regarding the systems' characteristics will be provided by engaging local value chain actors via interview questionnaires and guidelines. Mostly quantitative data are expected to come up recorded in spreadsheet format with

---

<sup>8</sup> Neuman, W. L. (2014). Social research methods: Qualitative and quantitative approaches. Boston: Pearson.

additional, linked to them, document notes. Finally, in order to achieve a better and more interactive understanding of the value chains, data may be stored and customized in map format, such as drawings (.dwg) or regional maps (.vdx) using software like AutoCAD and Microsoft Visio respectively.

### *Data from available inventories and tools*

Data will be collected through a bibliographic review from already developed inventories and tools of bioeconomy projects, which are available to MainstreamBIO's partners. The development of info sheets on small-scale biobased technologies, business models and social innovations will be built on these data, which will be collected in various formats, especially in machine generated, reports and infographics.

### *Generated info sheets on small-scale biobased technologies*

Data series will be generated during the development of MainstreamBIO innovation support services and digital toolkit. A bibliographic review of pre-existing inventories and tools of bioeconomy projects available to partners fuels the development of small-scale biobased technologies info sheet by WR, which will be used for the deployment of "Catalogue" tool. In addition, interviews will take place so key stakeholders will be consulted and provide further data collection when necessary. The outcomes are expected to be both qualitative and quantitative data and will be catalogued in a standard text document (.docx) completed with spreadsheets (.xlsx).

### *Generated info sheets on business models*

This generated dataset is an info sheet on business models regarding bioeconomy. Same as the previous one, building on already developed inventories and tools of bioeconomy projects available to partners, findings will constitute the info sheet about business models developed by INNV, while key stakeholders will be consulted via interviews to provide further data in order to fulfill the info sheet, which will also be used for the deployment of "Catalogue" tool. Collected data are expected to be mostly qualitative accompanied with few quantitative ones and will be stored in a standard text document (.docx), business notes (.docx) and spreadsheets (.xlsx).

### *Generated info sheets on social innovations*

This generated data series, gauging the needs of MainstreamBIO innovations support services and digital toolkit development, relates to social innovations. Insights drained from other projects', available to partners, inventories and tools relative to bioeconomy fuel the development of an info sheet on social innovations by WHITE, enriched with data provided from key stakeholders via interviews, which will bring to completion the deployment of "Catalogue" tool. Collected data are more likely to be of qualitative nature and will be recorded in document format and/or notes (.docx).

### *Key stakeholders' data on info sheets*

In order to develop the above datasheets further data from key stakeholders are necessary. During Task2.1 at least 15 key stakeholders, such as researchers and technology providers, will be identified and consulted via interviews. The collected data are going to be personal information and feedback for the needs of the "Catalogue" tool of MainstreamBIO digital toolkit. These data are a mix of qualitative and quantitative nature information about technologies, business models and social innovations for small-scale bio-based solutions and will be recorded in the form of interview questionnaires (.docx) and transcripts (.mp4).

### *Efficient and cost-effective nutrient recycling practices*

Practical data relative to efficient and cost-effective nutrient recycling practices, with focus on waste streams, fertilizer products, social perception and acceptance and relevant legislation will be

collected by partners until Project's eighth month in order to assess against specific criteria the practices and deploy a dedicated best practices template. Moreover, during the above activity, in-depth interviews will be held by partners to gain useful information from relevant stakeholders and enrich the data collection. Data collected are going to be mostly of quantitative nature and will be recorded in document (.docx) and spreadsheets (.xlsx) formats, while the information provided by stakeholders will be stored in the form of interview questionnaires (.docx).

### *Co-creation workshop material*

In the frame of MainstreamBIO co-creation workshops, a diverse group of ten to fifteen stakeholders per MIP will co-define the service portfolio of the respective MIP and collect feedback on the functionalities of MainstreamBIO digital toolkit to support its development. Guidelines will be prepared by WHITE in order to be utilized for the coordination of workshops' organization. Collected insights combined with WP1 results will define portfolio's services and their delivery by each MIP, while this information and any prepared material will feed the MainstreamBIO toolkit across two innovation support rounds. Ideas and relevant insights will be collected and written up by means of notes and minutes as document files, while videos and photographs may be collected in audio-visual format (.jpeg, .mp4).

### *Co-creation workshop personal data*

During the co-creation workshops per MIP, stakeholders will participate in and give their feedback, discuss and co-define the service portfolio. Stakeholders' personal data are collected during these activities and recorded in participant lists for analysis, promotional utilization or any other usage that partners may find worthwhile. Consent forms are used for the collection and processing of data from stakeholders in line with GDPR.

### *Feedback for the development of decision-making model*

The multi-criteria decision-making model is fed with knowledge compiled under WP1 and Tasks 2.1 and 2.2 but also with feedback from regional focus groups. Data collected from regional focus groups per MIP will fuel the development of decision-making model and, by extension, the development of the Decision Support System of MainstreamBIO digital toolkit. The provided feedback is about social, economic and environmental criteria and their allocated weightings used to guide the decision-making operation of the model. These data are qualitative and will be written in a standard text document and interview questionnaires (.docx) and transcriptions (.mp4).

### *Material from relevant Projects' toolkits*

Starting from the relative project TRANSITION2BIO, data will be collected from its awareness, education and communication toolkits, in order to fuel the development of the Bioeconomy Repository and Tool Library of MainstreamBIO digital toolkit. The collected material is expected to be mostly qualitative and will be probably elicited in various formats of documents, videos, spreadsheet, reports and infographics.

### *Promising cases and needs*

Data will be collected across two rounds per MIP through open calls for interest with multi-actor partnerships and regional scouting to identify and select potential cases that could be supported from innovation support services. Call transcripts (.mp4), business information and contact details (.docx, .xlsx) are most likely to be used for storage of collected data via open calls, while interview transcripts (.mp4), notes, business information, meeting notes and contact details (.docx, .xlsx) will be used to record data via regional scouting. In addition, data collected through regional scouting may be stored as photographs (.jpeg). Moreover, a selection matrix with guidelines and specific criteria will be used in order to assess the collected data against the relative criteria and select the

best cases. Finally, meetings and interviews with the selected multi-actor partnerships will be conducted in order to assess their needs and the provided data will be stored as meeting notes and interview transcripts.

### *Generated tailored innovation roadmaps*

Using as input the “Promising cases and needs” dataset, MIPs will contact the actors of each selected case to inform them about their expected involvement and elaborate a tailored innovation roadmap for each one. These generated roadmaps are built on each selected case’s attributes and needs so actors can easily understand, adopt and benefit from them. The generated data are mostly qualitative and will be provided in standard document texts as guidelines.

### *Capacity building workshop material*

In the frame of the MainstreamBIO capacity building workshops, initially all partners running a MIP will gain a dedicated training on how to successfully organize the capacity building workshop. After that, farmers, producers and local actors will be coached through the capacity workshop by expert trainers within each MIP in order to better understand the expectations from innovation support service and how to make the best use of digital toolkit. Data in audio-visual format are going to be prepared for the training. Beyond the prepared material, data will be collected during the workshops as standard document text, notes and minutes (.docx), photos and videos will be captured (.mp4, .jpeg, .png) and participant lists (.docx) will be created.

### *Capacity building workshop personal data*

Stakeholders within each MIP will participate and attend the trainings during capacity building workshops, while expert trainers will contribute to the successful delivery of the knowledge to stakeholders. In order to perform this activity, personal data of stakeholders and expert trainers will be collected and recorded on participant lists and spreadsheets for any analysis and usage by partners, delimited by consent forms.

### *Partners’ portfolio of technical and business services*

In order to enhance the market uptake of small-scale bio-based solutions, hands-on support services will be delivered to multi-actor partnerships in line with their tailored innovations support roadmap. The services offered to each includes a blend of business and technical support drawing from a portfolio of services employed by consortium partners for years now successfully in practice. At the end of the Project’s first innovation round, the portfolio will be fine-tuned based on feedback collected and analysed in Task 4.1. Data collected for the Portfolio are going to be both qualitative and quantitative and will be recorded in the form of technical data, business and financial information, services lists and machine generated data.

### *Networking events and demo days material*

During MainstreamBIO, connections between the supported multi-actor partnerships and suitable partners as well as the engagement of new actors regarding the bioeconomy are expected to come up through two networking events and one demo day organized by each MIP. Mostly qualitative insights are to be collected by the fulfillment of networking events and demo days and will be recorded in standard document texts, participant lists and minutes, while captured photographs and videos will accompany them.

### *Networking events and demo days personal data*

Aiming to create connections between supported multi-actor partnerships and suitable partners as well as to inspire further actors to get engaged in MIPs will lead to a collection of the respective stakeholders’ personal data. Data will be written in participant lists or/and spreadsheets

accompanied by useful notes. Consent forms will be used for the data collection in order to comply with GDPR and, by extension, the ability for analysis and utilization.

### *Campaigns material*

In order to enhance the understanding of bioeconomy and small-scale bio-based solutions, two regional awareness raising, and education campaigns will be deployed by MIPs. Data will be collected during campaigns relative to their baseline specifications, with the aim to be used by MIPs for the development of dedicated action plans. The recording will be in many formats such as audio-visual, notes, text documents, minutes and spreadsheets, and data's nature is expected to be mostly qualitative.

### *Generated action plan per MIP*

Each MIP will develop and implement action plans tailored to their needs and context, aiming to better understand the bioeconomy and small-scale bio-based solutions across two innovation support rounds. These action plans will be built on the defined baseline specifications of campaigns and generated data will be stored in a standard document text and/or notes accompanied by spreadsheets.

### *Performance and impact*

Data will be collected during the MainstreamBIO Project through a performance monitoring and impact assessment system in order to evaluate and improve the innovation support services and digital toolkit. Data provided by the monitoring and evaluation system are expected to be both qualitative and quantitative and will be stored in the form of questionnaires and/or written in standard document texts along with spreadsheets.

### *Regional scale up workshop material*

In the frame of MainstreamBIO Project, regional scale-up workshops will take place in each MIP with a view of exchanging experiences gained through project, brainstorming and discussing case studies and success stories developed by the project between multi-actor partnerships and stakeholders. The material collected through workshop's activities is expected to be mostly of qualitative nature and will be stored in many types of formats. Videos and photographs will be captured, insights and minutes are going to be noted in standard text documents, as well as participant lists will be created in spreadsheets or text documents.

### *Regional scale up workshop personal data*

During MainstreamBIO regional scale up workshops, stakeholders and multi-actor partnerships will participate in and exchange experiences between them. For the purpose of regional scale up workshops, personal data from participants are going to be collected and recorded in participant lists format and spreadsheets filled with particulars. All the collected data will be aligned with GDPR, and consent forms are going to be used for the needs of data processing.

### *Learning workshops material*

In the frame of MainstreamBIO Project, each MIP will organize one mutual learning workshop with the aim of cross-regional sharing good practices and knowledge gained. Part of the workshops are field visits for stakeholders coming from different regions than the local area and MIP respectively. Data collected by partners through the implementation of workshops are more likely to be of qualitative nature insights and will be recorded in various types of formats, with the photographs, videos, captured minutes, participant lists and document texts being the most expected.

### *Learning workshops personal data*

Representatives of linked networks and initiatives will be invited to participate in the mutual learning workshops, visit deployment sites of small-scale bio-based solutions in rural areas and attend local demonstrations. The implementation of the above activities requires a collection of personal data from the participating stakeholders, which will be written in participants lists and/or spreadsheets. Consent forms are going to be used, with the purpose of alignment with GDPR and the ability for processing data by partners.

### *Policy insights set*

Building on WP1 and WP2 outcome coupled with desk research, an initial Policy insights set is generated, which will be refined during the project. Data generated are qualitative and more likely to be written in a standard text document or notes. The final set of Policy Insights is called “Policy Recommendations and Briefs” and will be refined according to EU policy roundtable outcomes and comments as well as insights from other projects.

### *MainstreamBIO Replication Guide data*

MainstreamBIO Replication Guide is built on insights from Tasks 4.1, 4.2 and 4.3 and its development will help interested regional actors, with practical guidelines and recommendations, to set up MIPs or better attune their innovation support towards bioeconomy, but also, generated data will fuel discussions during EU policy roundtable and, by extension, the development of the final version of MainstreamBIO Replication Guide. Machine and/or user generated provided from MainstreamBIO Replication Guide usage are going to be stored as web data in various formats.

### *MainstreamBIO Replication Toolkit data*

Similar to MainstreamBIO Replication Guide, the Replication Toolkit is built on Tasks 4.1, 4.2 and 4.3 and its development will help interested regional actors, with tools, to set up MIPs or better attune their innovation support towards bioeconomy. In addition, machine and/or user generated data will feed discussions during EU policy roundtable and, eventually, the development of the final version of MainstreamBIO Replication toolkit. Data generated using MainstreamBIO Replication Toolkit will be recorded in various types of formats.

### *Insights from EU policy roundtable*

A dedicated EU policy roundtable will be organized by partners and meaningful information and insights will be collected from discussions during its implementation. Provided data will contribute to the elaboration of the final set of “Policy Recommendations and briefs” as well as the refinement of MainstreamBIO Replication Guide and Toolkit. Collected data will be mostly qualitative and will be written in text documents and participant lists.

### *Data collected for practice abstracts using EIP-AGRI format*

This data will be collected from interviews with stakeholders in the project’s focal regions, containing information and video footage on the value and benefits that can stem from using the project’s knowledge as well as information on how the project’s results can be practically utilized in the standard format of “practice abstracts” produced for the EIP-AGRI. The content of these interviews will be recorded and will be stored in the form of video files.

### *Data collected for audio-visual material*

Data will be collected from MIPs activities, regarding the adoption of small-scale bio-based solutions on the supported cases and enriched with testimonials from stakeholders for the preparation of an audio-visual material which will be contributed to the Knowledge Centre for Bioeconomy. This

material is able to serve the practitioners with information, recommendations and practices based on the supported cases' outcomes. Collected data from activities and testimonials will be recorded in video and audio formats.

### *Business models analytics*

To elaborate business plans for MIPs and toolkit, data will be collected from stakeholders through surveys and interviews, when necessary, for the purpose of assessing, refining and validating the sketched business models. Stakeholders in each MIP will assess the business models and give feedback regarding specific criteria to their interests and market fit. Data provided through feedback will probably be both qualitative and quantitative and are expected to be business information written in standard text document accompanied by interview notes, surveys and spreadsheets.

### *AB feedback*

During the implementation of MainstreamBIO project, there are several project key stages where guidance and feedback from experts on the field is needed to successfully deploy the respective activities. An advisory Board composed of experts is to set-up and provide the necessary guidance and analysis of MIPs activities' outcomes, aiming to monitor, evaluate, refine and validate MainstreamBIO support services and digital toolkit. Data collected via AB activities and involvement, such as discussions and digital validation workshops, are expected to be comments and proposals written in standard document texts and spreadsheets.

### *AB member list*

In the framework of setting up the MainstreamBIO Advisory Board, personal data of AB experts will be collected by partners. Collected data includes information such as name, surname, age, region, experience, education and expertise and will be stored in member lists. Finally, consent forms will be used for the ability of processing AB members' personal data and specific terms of reference will be developed to provide the basis for the activities of the AB.

### *Material collected from project management and coordination*

During the implementation phase of MainstreamBIO project, data will be collected from management and coordination activities. More specifically, the collection/generation of data comes up from MIPs' management, partners' coordination, communication, Quality Assurance processes, progress monitoring, risk analysis, workshops and events. The above data series are expected to be both qualitative and quantitative and stored in various types of formats, such as recorded videos, captured photographs, noted minutes, written insights in text documents, reports presenting outcomes and progress of activities, and participant lists.

**Data collected/generated through direct input methods will be stored in formats which allow the documentation of information from various files and documents in a single location. By doing so, it is possible to circulate raw data from transcripts, as well as text, images, and other objects from other files to one document file or multiple tabs of a single spreadsheet. Moreover, both formats can be immediately converted into open and machine-readable formats (e.g. .xml and .csv) boosting the interoperability and re-usability of the data produced in the framework of MainstreamBIO.**

### ***2.2.2 Data collected for / generated by the utilization of the MainstreamBIO digital toolkit***

The MainstreamBIO digital Toolkit aims to better match bio-based technologies, social innovations and good nutrient recycling practices with available biomass and market trends as well as to enhance understanding of the bioeconomy with a suite of educational resources building on existing research results and tools. A collection of 6 tools will be developed and integrated in the MainstreamBIO digital Toolkit. This Toolkit consists of: i) Catalogue of small-scale bio-based solutions (technologies, business models and social innovations), ii) Collection of best practises for nutrient recycling, iii) BioForum, iv) Decision Support System, v) Bioeconomy Repository and vi) Tool Library. Along these lines, users of various roles, such as farmers, foresters and other biomass producers, bioeconomy value chain actors, technology providers, supporting environment agents, research and academia and policy makers, are expected to utilize the functionalities offered by the MainstreamBIO digital Toolkit which in turn will generate valuable data for consortium partners.

Along these lines, data collected by the users of the MainstreamBIO digital Toolkit includes data that users of the Toolkit will provide in order to register, create a profile and use the Toolkit (information such as name, contact details, location and organisation). It also includes data generated based on tracking the activity of users across the MainstreamBIO digital Toolkit that will be utilised for identifying areas for improvement. The goal is to support a data-driven process for improving the Toolkit by identifying processes that need enhancements and/or functionalities that are of low or no interest that could be deprecated. Activity data will be collected for all roles and stand to not only streamline processes and functionalities, but also allow the partners to identify the most prominent features required and utilised by participants, which will subsequently support the business modelling activities of the project, fostering the sustainability of the MainstreamBIO digital Toolkit.

Further details on data collected and/or generated from the use of the different constituent tools comprising the MainstreamBIO digital toolkit are concisely outlined in the following subsections.

#### ***“Catalogue of small-scale bio-based technologies, business models and social innovations” data***

The MainstreamBIO “Catalogue” tool will be a combination of data collected and validated from key stakeholders and generated info sheets on technologies, business models and social innovations for small-scale bio-based solutions built on already developed inventories and tools of bioeconomy projects. Using this tool, stakeholders will be able to search and compare functionality for cross-case comparisons, across catalogue items, implementation and impact parameters and, by extension, assess opportunities for scaling and transferability.

#### ***“Collection of best practices for improved nutrient recycling” data***

“Collection of best practices for improved nutrient recycling” is a MainstreamBIO tool that embodies practical information on efficient and cost-effective nutrient recycling practices, assessed against specific criteria and enriched with information from relevant stakeholders through in-depth interviews. This tool provides farmers with resources for successful management of nutrients and organic matter recycling back to soils in line with circular economy principles.

#### ***“BioForum” data***

The MainstreamBIO “BioForum” tool may be utilized by rural actors in the frame of communication between them. Due to its forum-based nature, “BioForum” tool enables users to communicate asynchronously, serving as an open environment for exchanging good practices, nurture novel ideas and solutions, make connections and feed project’s activities.

### *“Decision Support System” data*

The MainstreamBIO “DSS” tool will be an easy-to-use decision support system, for rural actors/communities, based on a multi-criteria dashboard. The decision support system will guide rural actors/communities through simple means to identify the solutions that best fit their territorial dynamics and make better informed decisions regarding the adoption of small-scale bio-based solutions. Rural actors/communities will be able to provide data such as product type, business operations, production volume, biomass and waste flows, etc. and compare a proposed model against a baseline scenario related to matching the available biomass and waste streams with small-scale bio-based technologies, business models and social innovations, accounting for economic, social and environmental sustainability.

### *“Bioeconomy Repository” data*

Built upon results and initiatives of key EU bioeconomy projects run by consortium partners as well as MainstreamBIO initiatives, “Bioeconomy Repository” tool aims to raise awareness on bioeconomy educational resources and aggregate available educational material. Farmers and rural communities using this tool can be informed about the benefits of small-scale bio-based solutions and their income diversification opportunities, relevant challenges and tactics to overcome them and the way in which bioeconomy can contribute to the social, economic and environmental well-being of rural communities.

### *“Tool Library” data*

The MainstreamBIO “Tool Library” consists of bioeconomy tools from partners or projects where farmers and rural communities will be able to have access. Virtual Toolbox, Toolbox, catalogues, side stream value tool, bioresource mapping tool and many other tools will be available to interested stakeholders for utilization in order to improve their production, commercial and financial operations, facilitate the adoption of small-scale bio-based solutions, visualize their production and waste flows and amongst others to face any upcoming challenge or exploit an opportunity.

**More information regarding the tools of the MainstreamBIO digital toolkit and the data collected / generated through their use will be provided in future updates of the DMP, as their functionalities are further specified and developed in line with the findings stemming from the project’s studies and activities.**

## ***2.2.3 Data collected / generated from dissemination, communication and clustering activities***

### *Website analytics*

The MainstreamBIO website is supported by tracking and analytics software to better understand visitors’ interactions with the website towards improving its functionality, while user privacy is protected. To identify registered users on the website, cookies are used by Google Analytics to provide them with the possibility to comment using their profile and to edit their newsletter preferences. Cookies created by Google Analytics start with: `_ga`, `_gat`, `_gid`. Users have the ability to delete or block website cookies. Moreover, anonymous cookies providing information about users’ location and what pages they visit are used. These cookies sometimes collect anonymous statistics about the user (such as gender, age, geographical location, and interests) and the data is stored by the analytics services that we use. These cookies also gather data regarding what pages users visit,

how long they stay on the page, what videos they watch or files they download. Tracking cookies from social media networks such as Facebook, Twitter, YouTube and LinkedIn are also used, for customised advertising targeting users of the MainstreamBIO website on these platforms and to assess the performance of ads on these platforms. The data collected by these platforms is anonymised, which means that we cannot see the social media profiles of users.

### *Social Media statistics (including twitter and LinkedIn)*

This data will be collected/generated through a periodic monitoring of the project's social media statistics (including Twitter and LinkedIn) with a view to measuring and assessing the performance and results of the project's social media activity in terms of dissemination and communication. With that in mind, the data will be both qualitative as well as quantitative in nature addressing the metrics reached on each channel (e.g., followers, tweets impressions on twitter etc.). Additionally, this data will be followed by an analysis of the results stemming from it and possible ways to improve the results so as to reach the project's targets. All in all, the data will be stored in a spreadsheet (.xlsx) while at the same time the analysis of the results will be stored in a standard document text (.docx).

### *Data collected from project events*

This data will be collected during the implementation of the project through: (i) the different events (e.g. co-creation workshops, train-the-trainer workshop, regional knowledge transfer days, clustering webinars, final event, etc.) organised by MainstreamBIO (either alone or jointly with other projects or initiatives) consisting of the participants lists that will enclose demographic information about the participants; and (ii) the participation of MainstreamBIO partners in relevant third party events in order to reach out and engage stakeholders, thus collecting general information about the events attended and their outreach.

Along these lines, this data is collected so as to keep track of the results of activities in events for stakeholder engagement and provide the opportunity to project partners to report on these activities. Moreover, this data will be updated every time a partner attends an event, or a partner organises an event. Finally, the data will be both quantitative and qualitative in nature and will be stored in a standard spreadsheet (.xlsx).

### *Newsletter subscription (e.g., contact details of subscribers)*

In order to enhance the dissemination activities of the project, newsletter subscriptions are foreseen on the project's website. A subscription form hosted in the project's website will facilitate the collection of this data. Any interested stakeholder can voluntarily provide his/her contact details in a dedicated sign-up form, so as to receive the most up-to-date news and outcomes of the project. A newsletter will be sent to subscribers once per 6 months. The data will be collected so as interested stakeholders can be informed about the MainstreamBIO as well as its digital Toolkit. Along these lines, the data will be comprised of a list of stakeholders along with their basic contact information: (i) email address, (ii) first and last name, (iii) country, (iv) type of organisation, (v) region and (vi) gender. A copy of this contact list is stored on MailChimp's (<http://mailchimp.com>) server which is used for e-mail campaigns and newsletter distribution. All personal information included in this contact list is used and protected according to MailChimp's Privacy Policy.

### *Data from dissemination and communication activities*

This data will be collected through the periodic monitoring of the project's miscellaneous dissemination activities such as publications in relevant journals, posts in the blogs, etc. The data will consist of a list of publications and posts published by the consortium partners. The purpose of collecting this data is to assess the outreach and efficiency of the dissemination activities during the implementation of the project. For this purpose, a template will be shared with all partners to

recommend activities to be performed and to log the activities they performed. The template is provided also online so as the partners can directly update their input. Finally, all the data will be integrated in spreadsheet (.xlsx).

## 2.3 Origin of data and re-use of pre-existing data

In the context of MainstreamBIO, **new data** will be collected/generated by partners as well as external stakeholders participating in the activities of the project and/or using its Digital Toolkit. With that in mind and aside consortium partners, **external groups of stakeholders from which new data will originate include:**

- Biomass producers (farmers, foresters, farmer's unions, producers associations etc.)
- Bioeconomy value chain actors (agri-food industry, biobased industry, technology providers, retailers, wholesalers, logistics, consultants, advisors, rural entrepreneurs etc.)
- Policy makers at regional, national and EU level related to bioeconomy (regional and national public authorities, EU public authorities, regulatory bodies, advisory bodies etc.).
- Academic community in the field of bioeconomy and small-scale biobased technologies (e.g., field experts, R&D centres and facilities, universities and educational institutes, collaborative projects and initiatives etc.)
- Civil society (consumers, consumers' associations, NGOs, media representatives etc.)

Moreover, pre-existing data will be utilised within the context of MainstreamBIO as well. In particular, outputs from EU-funded projects (e.g., TRANSITION2BIO, POWER4BIO, BE-RURAL, RUBIZMO etc.), national projects, institutions and other relevant initiatives in a large extent will provide a solid basis for MainstreamBIO. The MainstreamBIO consortium will strive to make the most of and advance the work and results of these projects. Such activities include the development of the MainstreamBIO toolkit and more specifically the Bioeconomy repository and Tool library. The whole development process of the Decision Support System and the co-creation of portfolio of innovation support services and of the MainstreamBIO toolkit, builds upon the pre-existing knowledge, methodologies and outputs of other projects, initiatives and relevant institutions. Finally, consortium partners' internal knowledge, experience and expertise from their participation in other projects and initiatives will directly and indirectly support the implementation of activities throughout the project.

## 2.4 Expected size of data

MainstreamBIO entails a series of activities aiming at setting the stage for and ultimately facilitating the development, piloting, evaluation, validation and fine-tuning of the MainstreamBIO digital toolkit and support services. With that in mind, the table that follows presents the different activities implemented during the course of the project in which data is collected/generated, the types and formats of the data as well as the expected size of the data.

*Table 2: Expected size of data*

No.	Name of activity	Data	Type of data	Format of data	Expected size of data (KB)*
1	Extensive mapping of relevant stakeholders and selection of the key ones	Current status of relevant stakeholders	Notes, Spreadsheets	.xlsx, .docx	1,000

No.	Name of activity	Data	Type of data	Format of data	Expected size of data (KB)*
2	Analysis of needs, barriers and challenges to uptake and/or scale up small-scale bio-based solutions	Farmers', rural communities' and consumers' needs, socio-economic context and framework conditions	Interview Questionnaires, Guidelines, Online survey	.docx, .xlsx	2,500
3	Analysis of attributes in the existing regional value chains	Current status of value chains in Project focal regions	Spreadsheets, Interview Questionnaires, Guidelines, Shapefiles/Maps	.docx/.xlsx, .vdx, .dwg, .shp	50,000
4	Catalogue technologies, business models and social innovations for small-scale bio-based solutions	Data from available inventories and tools	Machine Generated, Reports, Infographics	Data in various formats	100,000
		Generated info sheets on small-scale biobased technologies	Factsheets, Spreadsheets, technological information	.docx, .xlsx	1,000
		Generated info sheets on business models	Notes, Spreadsheets, Business information	.docx, .xlsx	1,000
		Generated info sheets on social innovations	Notes, Spreadsheets	.docx, .xlsx	1,000
		Data from key stakeholders	Interview questionnaires, interview transcripts	.docx, .mp4	5,000
5	Collection of best practices related to nutrient recycling	Efficient and cost-effective nutrient recycling practices	Spreadsheets, Factsheets, Interview Questionnaires	.xlsx, .docx	1,000
6	Organization of a co-creation workshop per MIP	Co-creation workshop material	Notes, Photos, Minutes, Participant lists	.docx, .jpg, .png, .pdf	10,000
		Co-creation Workshop Personal data	Notes, Spreadsheets, Participant lists	.docx, .xlsx	1,000

No.	Name of activity	Data	Type of data	Format of data	Expected size of data (KB)*
7	Development of methodology for matching	Feedback for the development of decision-making model	Interview Questionnaires, Interview transcripts, Notes	.docx, .mp4	10,000
8	Development, upgrade and fine-tuning of the MainstreamBIO digital toolkit	Material from relevant Projects' toolkits	Reports, Video, Infographics, documents, spreadsheets	.mp4, .pdf, .docx, .jpg, .png	100,000
		"Catalogue of small-scale bio-based technologies, business models and social innovations" data	User generated/ machine generated	.docx, .xlsx, .pdf, .jpg, .png	5,000
		"Collection of best practices for improved nutrient recycling" data	User generated/ machine generated	.docx, .xlsx, .pdf, .mp4	10,000
		"BioForum" data	User generated/ machine generated	Web data in various formats	2,000
		"Decision Support System" data	User generated/ machine generated	Web data in various formats	5,000
		"Bioeconomy Repository" data	User generated/ machine generated	Web data in various formats	20,000
		"Tool Library" data	User generated/ machine generated	Web data in various formats	100,000
9	Identification and selection of suitable cases of multi-actor partnerships per MIP	Promising cases and needs	Call transcripts, Interview transcripts, Meeting Notes, Photos, Contact details,	.docx, .mp4, .jpg, .png, .xlsx	10,000

No.	Name of activity	Data	Type of data	Format of data	Expected size of data (KB)*
			Business information		
		Generated tailored innovation roadmaps	Notes	.docx	1,000
10	Organization of capacity building workshop	Capacity building workshop material	Notes, Photos, Videos, Minutes, Participant lists	.docx, .mp4, .jpg, .png, .pdf	10,000
		Capacity building workshop personal data	Notes, Spreadsheets, Participant lists	.docx, .xlsx	1,000
11	Delivery of innovation support services	Partners' Portfolio of Technical and Business services	Technical data, Business information, Service lists, Financing Information	Data in various formats	100,000
12	Organization of networking events and demo days	Networking events and demo days material	Notes, Photos, Videos, Minutes, Participant lists	.docx, .mp4, .jpg, .png, .pdf	10,000
		Networking events and demo days personal data	Notes, Spreadsheets, Participant lists	.docx, .xlsx	1,000
13	Deployment of regional awareness raising and education campaigns per round	Campaigns material	Notes, Videos, Audios, Spreadsheets, Photos, Machine generated, Minutes	.docx, .xlsx, .mp4, .pdf, .jpg	100,000
		Generated action plan per MIP	Notes, Spreadsheets	.docx, .xlsx	1,000
14	Monitoring and evaluation of regional MIP	Performance and impact	Notes, Spreadsheets, Questionnaires	.docx, .xlsx	5,000
15		Regional scale up workshop material	Notes, Photos, Videos, Minutes,	.docx, .mp4,	10,000

No.	Name of activity	Data	Type of data	Format of data	Expected size of data (KB)*
	Organization of regional scale up workshop per MIP		Participant lists, spreadsheets	.xlsx, .jpg, .pdf	
		Regional scale up workshop personal data	Notes, Spreadsheets, Participant lists	.docx, .xlsx	1,000
16	Organization of cross-regional learning workshops	Learning workshops material	Notes, Photos, Videos, Minutes, Participant lists	.docx, .mp4, .jpg, .png, .pdf	10,000
		Learning workshops personal data	Notes, Spreadsheets, Participant lists	.docx, .xlsx	1,000
17	Development and refinement of MainstreamBIO's Replication Guide and Toolkit and "Policy Insights" set	Policy Insights set	Notes	.docx	1,000
		MainstreamBIO Replication Guide data	User generated/ machine generated	Web data in various formats	10,000
		MainstreamBIO Replication Toolkit data	User generated/ machine generated	Web data in various formats	50,000
		Insights from EU policy roundtable	Notes, Participants lists	.docx, .xlsx	1,000
18	Production of EIP-AGRI abstracts and audio-visual material	Data collected for practice abstracts using EIP-AGRI format	Notes, Interview transcripts	.docx, .pdf	1,500
		Data collected for audio-visual material	Audio Testimonials, Video	.mp4, .pdf	700,000
19	Monitoring and assessment of the dissemination, communication, stakeholder engagement and clustering activities	Website analytics	Machine generated	.xlsx	20,000
		Social media statistics	Machine generated	.xlsx	150
		Project events data	Spreadsheets	.xlsx	150
		Newsletter subscriptions	Spreadsheets	.xlsx	300

No.	Name of activity	Data	Type of data	Format of data	Expected size of data (KB)*
		Data from dissemination and communication activities	Spreadsheets	.xlsx	150
20	Sketching alternative business models for the operation of MIPs	Business models Analytics	Interview Notes, Survey, Spreadsheets, Business information	.docx, .xlsx	10,000
21	Setting up the Advisory Board Experts	AB feedback	Notes, Spreadsheets	.docx, .xlsx	1,000
		Ab Member list	Member lists	.xlsx	500
22	Project management and coordination	Material collected from Project management and coordination	Contact Lists, Photos, Minutes, Reports, Videos, Spreadsheets, Notes	.docx, .xlsx, .mp4, .pdf, .jpg, .png	100,000

\* The estimated expected size of the data is based on the adjusted size of data generated via similar activities of project partners in the past unless otherwise indicated.

## 2.5 Data utility

The stakeholders that may find meaningful utility for the data to be collected/generated or re-used by the project (both within as well as outside of MainstreamBIO's consortium) along with the benefits that could arise for them by utilizing this data, are concisely presented in the table that follows.

*Table 3: Data utility*

Stakeholder Groups	Data utility
<b>Biomass producers (farmers, foresters, farmers' unions, producers' associations etc.)</b>	The aim of MainstreamBIO, is to collect evidence and data to demonstrate the overall benefits of small-scale bio-based solutions and provide practical support through the innovation support services and the Toolkit for local biomass producers as well as for producer organisations etc. Knowledge of the project can be used by biomass producers to uptake and/or scale-up small-scale bio-based solutions as well as to elaborate a tailored to their needs sustainable business model. Information such as the decision support system, catalogues of technologies and best practices, digital tools and repositories will help them define their identity and establish a concrete bio-based business strategy. Finally, advisors working with biomass producers in the agri-food and forest industry will be able to utilise new data and tools of the project to support farmers, foresters and biomass producers in their transition to bioeconomy as well as to identify opportunities for diversification.
<b>Bioeconomy value chain actors (agri-food)</b>	MainstreamBIO acknowledges the importance of all actors in rural value chains and encompasses this dimension in the project's outcomes. Cataloguing and

Stakeholder Groups	Data utility
<b>industry, biobased industry, technology providers, retailers, wholesalers, logistics, consultants, advisors, rural entrepreneurs etc.)</b>	<p>mainstreaming of small-scale bio-based solutions that will be conducted in MainstreamBIO will open up new markets and new opportunities for further technological applications to the respective technology providers. In addition, the cases supported under MIPs will serve as ideal test beds for new technological developments, optimisations and implementations as well as for new endeavours in collaboration with the local bio-based industry, beyond the end of the project. Project data and support services will also highlight and bring knowledge and benefits for advisors, consultants, extension services and intermediaries such as logistics and retailers by helping them to network and to identify opportunities for complementing their current business circuits with small-scale bio-based practises</p>
<b>Policy makers at regional, national and EU level related to bioeconomy</b>	<p>Throughout its duration, MainstreamBIO is set on collecting and producing quantifiable evidence on the effectiveness and impact of the project's support measures and tools for the engagement of rural actors in MIPs as well as the market uptake of small-scale bio-based solutions, with a view to fostering their replication across rural Europe beyond the project's completion. Data generated to this end, may be of great utility for experts who design, implement and/or fund relevant policies. Data generated on designated policy activities (such as policy roundtable and policy briefs) will inform the design of measures for bringing the implementation of small-scale bio-based solutions into the mainstream across rural areas</p>
<b>Academic community in the field of bioeconomy and small-scale biobased technologies</b>	<p>In the frame of the MainstreamBIO project, interdisciplinary research is performed that largely builds upon prior research efforts to generate insights on small-scale bio-based solutions across rural Europe. Additionally, local actors are engaged in the project's research activities, covering the whole spectrum of perspectives in the rural community. Research data of the project that will be published in reports or peer-reviewed scientific journals as well as deposited in open repositories can be of great utility for scientists or/and experts in the field, ensuring continuity of effort to advance the knowledge in the field. Moreover, the production of "practice abstracts" for the EIP-AGRI as well as audio-visualls and contributions to the Knowledge Centre for Bioeconomy will provide practitioners with accurate and at the same time practical knowledge, connecting science with practice.</p>
<b>Civil society</b>	<p>MainstreamBIO's activities take into account the perspective of general public, aiming to conduct specific awareness raising actions towards bioeconomy and through the bioeconomy repository that will be integrated in the MainstreamBIO toolkit.</p>
<b>Project partners</b>	<p>The data collected/generated during MainstreamBIO is the corner stone for project partners in order to produce evidence-based results and ultimately achieve the objectives of the project. Indeed, this data will enable the co-development, testing, validation and roll-out of new business and marketing models for small-scale bio-based solutions as well as of the MainstreamBIO Toolkit. At the same time, this data may be meaningful for project partners beyond the end of the project as well, enabling them to build and capitalise upon interesting ideas and opportunities that may emerge to ensure the long-term sustainability of the MainstreamBIO methodology and Toolkit.</p>

## 3. FAIR data

The guidelines on Data Management Plan<sup>9</sup> of the Commission emphasise the importance of making the data produced by projects funded under Horizon Europe **Findable, Accessible, Interoperable as well as Reusable (FAIR)**, with a view to ensuring its sound management. This means using standards and metadata to make data discoverable, specifying data sharing procedures and which data will be open, allowing data exchange via open repositories as well as facilitating the reusability of the data. With that in mind, the following sections of the DMP lay out the methodology followed in the framework of MainstreamBIO with respect to making data findable, accessible and interoperable as well as ensuring their preservation and open access, with a view to increasing its re-use.

### 3.1 Making data findable, including provisions for metadata

#### 3.1.1 *Data discoverability and identification mechanisms*

MainstreamBIO places special emphasis in enhancing the discoverability of the data collected/generated or re-used during the course of its activities. **Open data produced during the implementation of the project will be locatable by means of a standard identification mechanism.** Indeed, MainstreamBIO will be able to assign globally resolvable **Persistent Identifiers (PIDs)** on any open data (more information on open data as well as the respective repositories we plan on employing in the context of the project are provided on section 3.2). An identifier is a unique identification code that is applied to a dataset, so that it can be unambiguously referenced. For example, a catalogue number is an identifier for a particular specimen and an ISBN code is an identifier for a particular book. PIDs are simply maintainable identifiers that allow for permanent reference to a digital object. In other words, PIDs are a way of giving digital resources, such as documents, images and data records, a unique and persistent reference number.

At the same time, data that are not open will be deposited in a searchable resource (i.e., the cloud web storage service of the project) and well-tailored identification mechanisms will be utilized as well, in the form of standard naming conventions that will safeguard their consistency and make them easily locatable for partners within the frame of the project. Along these lines, the following subsection provides further analysis on naming conventions and versioning.

#### 3.1.2 *Naming conventions and versioning*

Following a consistent set of naming conventions in the development of the project's data files can greatly enhance their searchability. With that in mind, MainstreamBIO creates consistent data file names that provide clues to their content, status and versioning, while also increasing their discoverability. In doing so, project partners as well as interested stakeholders can easily identify a file as well as classify and sort them.

According to the UK Data Archive ([UK Data Service, 2017b](#)), a best practice in naming convention is to create brief yet meaningful names for data files, that facilitate classification. The naming convention should avoid the utilisation of spaces, dots and special characters (such as & or !), whereas the use of underscores is endorsed, to separate elements in the data file name and make

---

<sup>9</sup> [https://ec.europa.eu/research/participants/data/ref/h2020/grants\\_manual/hi/oa\\_pilot/h2020-hi-oa-data-mgt\\_en.pdf](https://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/hi/oa_pilot/h2020-hi-oa-data-mgt_en.pdf)

them understandable. At the same time, versioning should be a part of a naming convention to clearly identify the changes and edits in a file.

With that in mind and to facilitate the reference of the datasets that will be produced during its implementation, MainstreamBIO employs a **standard naming convention that integrates versioning and takes into account the possibility of creating multiple datasets** during an activity that entails data collection/generation. Indeed, MainstreamBIO's naming convention considers this issue and addresses it by employing a unique element that captures the number of datasets that are produced under the same activity.

In particular, the **naming convention employed by the project is described below.**

[Name of project] \_ [Name of Study] \_ [Number of dataset] \_ [Issue Date] \_ [Version number]

- **Name of project:** MainstreamBIO
- **Name of Study:** A short version of the name of the activity for which the dataset is created.
- **Number of dataset:** An indication of the number assigned to the dataset.
- **Issue Date:** The date on which the latest version of the dataset was modified (YYYY.MM.DD.).
- **Version number:** The versioning number of a dataset.

With the above in mind, some **indicative examples** to showcase the naming structure that will be applied in the context of MainstreamBIO are provided below:

- **MainstreamBIO\_StakeholdersStatus\_Dataset1\_2023.01.31\_v1** – The first dataset generated from the mapping of relevant stakeholders conducted to select the key ones and set up the Multi-Actor Innovation Platforms. This is the first version of the dataset that was last modified on the 31<sup>st</sup> of January 2023 (31/01/2023).
- **MainstreamBIO\_NeedsBarriersChallengesAnalysis\_Dataset2\_2023.31.03\_v2** – The second dataset created through desk study and interviews with stakeholders, in order to identify and analyse the farmers' and rural communities' needs, perceptions, socio-economic context and framework conditions. The last modification of this dataset, which in this case produced the second version of the dataset, was on the 31<sup>st</sup> of March 2023 (31/03/2023).

Versioning of information makes a revision of datasets uniquely identifiable and can be used to determine whether and how data changed over time and to define specifically which version the creators/editors are working with. Moreover, effective data versioning enables understanding if a newer version of a dataset is available and which are the changes between the different versions allowing for comparisons and preventing confusion. In this context, **a clear version number indicator is used in the naming convention** of every data file produced during MainstreamBIO in order to facilitate the identification of different versions.

### 3.1.3 *Metadata allowing discovery*

In addition to consistent naming conventions and versioning, the project also follows a metadata-driven approach so as to allow discovery and further increase the searchability of the data, while also facilitating its understanding and re-use. Metadata is defined as “data about data” or “information

about information”<sup>10</sup>. It is usually structured textual information that describes the creation, content, or context of a digital resource – be it a single file, part of a single file, or a collection of many files. Metadata is the glue which links information and data across the world wide web. It is the tool that helps people to discover, manage, describe, preserve and build relationships with and between digital resources <sup>11</sup>.

In particular, three distinct types of metadata exist<sup>12</sup>, as presented below:

- **Descriptive metadata**, used to identify and describe collections and related information resources. Descriptive metadata at the local level helps with searching and retrieving. In an online environment, descriptive metadata helps to discover resources. Most of the times includes information such as the title, author, date, description, identifier, etc.
- **Administrative metadata** is used to facilitate the management of information resources. It is helpful for both short-term and long-term management and processing of data. This is information that will not usually be relevant to the public but will be essential for staff to manage collections internally. Such metadata may be location information, acquisition information, etc.
- **Structural metadata** enables navigation and presentation of electronic resources. It documents how the components of an item are organized. Examples of structural metadata could be the way in which pages are ordered to form chapters of a book, a photograph that is included in a manuscript or a scrapbook or the JPEG and TIF files that were created from the original photograph negative, linked together.

With that in mind, **data produced/used during MainstreamBIO is discoverable with metadata** suitable to its content and format. The project employs **metadata standards** to produce rich and consistent metadata with a view to supporting the long-term discovery, use and integrity of its data. More details on the metadata standards adopted by MainstreamBIO are provided on the following subsection.

### 3.1.4 *Standards for metadata creation*

**MainstreamBIO employs standards for creating metadata** for data collected/generated by the project, with a view to describing it with **rich metadata** and thus improving their discoverability and searchability. In result, effective searching, improved digital curation and easy sharing will be realized. In addition, the metadata standards applied enable the integration of metadata from a variety of sources into other technical systems.

With that in mind, for **MainstreamBIO’s openly available data** the metadata standards provided by **Zenodo will be used**. Zenodo (<https://zenodo.org/>) is an open repository developed under the European OpenAIRE programme and operated by CERN. The repository along with its metadata standards have been adopted and are being used by numerous research communities, enabling them to deposit research papers, datasets, software, reports as well as other research outputs. Along these lines, Zenodo creates metadata to accompany the datasets that are uploaded to the repository, extending their reach to a wider audience of interested stakeholders. This metadata can be exported in several standard formats, including open and machine-readable ones (such as MARCXML, Dublin

---

<sup>11</sup> Foulonneau, M., & Riley, J. (2008). Metadata for digital resources: Implementation, systems design and interoperability. Oxford: Chandos.

<sup>12</sup> Caplan, P. (2003). Metadata fundamentals for all librarians. Chicago: American Library Association.

Core, and DataCite Metadata Schema), following the guidelines of OpenAIRE and are stored by Zenodo in JSON-format according to a defined JSON schema<sup>13</sup>.

Project **data not open, will also be annotated with open and machine-readable metadata** following the **Dublin Core Metadata standard**. The Dublin Core Metadata element set (certified with the ISO Standard 15836) is a standard which can be easily understood and implemented and as such, is one of the best-known metadata standards. It was originally developed as a core set of elements for describing the content of web pages and enabling their search and retrieval. Among the reasons for selecting this standard is also the fact that **Zenodo is compatible with Dublin Core metadata formats** and thus any initially closed data, that may become open at a later stage (e.g., due to a change in the consortium's policy), will not lose its metadata. With that said, the Dublin Core metadata standard is a simple yet effective set for creating rich metadata that will describe a wide range of resources. The fifteen element "Dublin Core" described in this standard is part of a larger set of metadata vocabularies and technical specifications maintained by the Dublin Core Metadata Initiative (DCMI)<sup>14</sup>. The full set of vocabularies also includes sets of resource classes, vocabulary encoding schemes, and syntax encoding schemes. **An online metadata generator will be used to produce the different metadata elements required ([dublincoregenerator.com](http://dublincoregenerator.com)).**

### 3.1.5 *Search keywords included in the metadata*

The project's data will be provided with search keywords with a view to optimizing its findability as well as its ultimate re-use by interested stakeholders during its entire lifetime. With that in mind, the metadata standards employed by MainstreamBIO provide opportunities for tagging the data collected/generated and its content with keywords. In general, keywords are a subset of metadata and include words and phrases used to name data. In the context of MainstreamBIO, keywords are used to add valuable information to the data collected/generated as well as to facilitate the description and interpretation of its content and value.

Along these lines, the project's strategy on keywords is underpinned by the following principles:

- The who, the what, the when, the where, and the why should be covered.
- Consistency among the different keyword tags needs to be ensured.
- Relevant, understandable and clear keywording ought to be sought.

In general, the keywords will comprise terms related small-scale bio-based solutions, bioeconomy value- chain actors and biomass production. The keywords will accurately reflect the content of the datasets and avoid words used only once or twice within them.

### 3.1.6 *Offering metadata that can be harvested and indexed*

We know that the wild diversity of the metadata accompanying open data across the plethora of online repositories (e.g. disciplinary archives, institutional repositories, open access journals) can serve as barriers for their findability and sharing amongst different research communities. This is why in the context of MainstreamBIO we have aligned our metadata creating approach with the

---

<sup>13</sup> For more information on the JSON format and the JSON schema visit the following website: <http://json-schema.org/>

<sup>14</sup> Retrieved from: <https://www.dublincore.org/>

**Open Archives Initiative (OAI)**, which promotes the use of a standard protocol for metadata harvesting, designed for better sharing and retrieval of data residing in distributed repositories. This protocol, namely the Open Archives Initiative Protocol for Metadata Harvesting (OAI-PMH)<sup>15</sup> promotes interoperability standards that facilitate efficient dissemination of data amongst diverse communities<sup>16</sup>.

All structured **metadata linked to the project's open data will be offered in a way that can be exported and harvested** via the OAI-PMH thanks to the standards we adopt for metadata creation (see section 3.1.4). The same standards will also help us produce **metadata that facilitate indexing**. For instance, the use of the Dublin Core Metadata Standard (as further elaborated in section 3.3) provides a vocabulary of concepts with definitions in open-machine readable formats that enable easier indexing of metadata. Along these lines, there are several tools<sup>17</sup> which implement the Archives Initiative Protocol for Metadata Harvesting, such as **Arc source**, **EnhancedOAI Server** and **eprints.org**, and can be used for harvesting our data by different repositories.

MainstreamBIO's openly available data will be uploaded in Zenodo, which is in line with FAIR principles, including "To be Findable" principle. Metadata of each record uploaded in Zenodo is indexed and searchable directly in Zenodo's search engine immediately after publishing. Metadata of each record is sent to DataCite servers during DOI registration and indexed there.

## 3.2 Making data accessible

### 3.2.1 Repository

The **data produced by MainstreamBIO and deemed open for sharing and re-use, will be deposited to and securely stored by Zenodo ([www.zenodo.org](http://www.zenodo.org))**, which constitutes an **open data repository** and has been specifically selected to enable access to the project's open data free of charge. In fact, Zenodo builds and operates a simple service that enables researchers, scientists, EU projects and institutions, among others, to share and showcase research results (including data and publications) that are not part of the existing institutional or subject-based repositories of the research communities. It accepts any file format, promotes peer-reviewed openly accessible research, allows the creation of own collections and it is available free of charge both for MainstreamBIO to upload and share data as well as for other stakeholders to explore, download and re-use this data.

Moreover, as a digital repository, Zenodo registers **Digital Object Identifiers (DOIs)** for all submitted data through DataCite<sup>18</sup>, which is the leading global non-profit organisation that provides PIDs (and specifically DOIs) for research data, and preserves these submissions using the safe and trusted foundation of CERN's data centre, alongside the biggest scientific dataset in the world, the LHC's 100PB Big Data store<sup>19</sup>. This means that the data preserved in Zenodo will be accessible for years to come, and the DOIs will function as perpetual links to the resources. DOIs remain valuable since

they are future proofed against Uniform Resource Locator (URL) or even protocol changes, through resolvers (such as DOI<sup>20</sup>). With that in mind, an example of a DOI retrieved from this open repository follows the structure illustrated by Figure 1.

Figure 1: Typical DOI created by Zenodo

DOI 10.5281/zenodo.3901783

### 3.2.2 Data

#### Openly available and closed data

MainstreamBIO, in line with FAIR principles of data management in the context of Horizon Europe, adopts the good practice of making data as open as possible and as closed as necessary. This calls for partners to disseminate its data that have the potential to offer long-term value to external stakeholders and do not harm the confidentiality and privacy of the stakeholders that contributed to the collection/generation of this data, maximising the beneficial impact of MainstreamBIO.

**Only anonymised and aggregated data will be made open to ensure that data subjects cannot be identified in any reports, publications and/or datasets resulting from the project. The relevant project partner in each case will undertake all the necessary anonymisation procedures to anonymise the data in such a way that the data subject is no longer identifiable (more details on data management responsibilities are provided in Section 5.2).**

To this end, it is important to keep in mind that during the process of data anonymisation, data identifiers need to be removed, generalised, aggregated or distorted. Moreover, **anonymisation is different than pseudonymisation**, which falls under a distinct category in the GDPR - anonymisation theoretically destroys any way of identifying the data subject, while pseudonymisation allows for the data subject to be re-identified with additional information. Along these lines, the table which follows provides a **list of good practices** for the anonymisation of quantitative and qualitative data derived from the tour guide on data management of the Consortium of European Social Science Data Archives (CESSDA).

Table 4: Good practices for data anonymisation

Type of data	Good practices
Quantitative data	<ul style="list-style-type: none"> <li>Remove or aggregate variables or reduce the precision or detailed textual meaning of a variable.</li> <li>Aggregate or reduce the precision of a variable such as age or place of residence. As a general rule, report the lowest level of geo-referencing that will not potentially breach respondent confidentiality.</li> <li>Generalise the meaning of a detailed text variable by replacing potentially disclosive free-text responses with more general text.</li> <li>Restrict the upper or lower ranges of a continuous variable to hide outliers if the values for certain individuals are unusual or atypical within the wider group researched.</li> </ul>

<sup>20</sup> Retrieved from: <http://dx.doi.org/>

Type of data	Good practices
Qualitative data	<ul style="list-style-type: none"> <li>• Use pseudonyms or generic descriptors to edit identifying information, rather than blanking-out that information.</li> <li>• Plan anonymisation at the time of transcription or initial write-up, (longitudinal studies may be an exception if relationships between waves of interviews need special attention for harmonised editing).</li> <li>• Use pseudonyms or replacements that are consistent within the research team and throughout the project. For example, using the same pseudonyms in publications and follow-up research.</li> <li>• Use 'search and replace' techniques carefully so that unintended changes are not made, and misspelt words are not missed.</li> <li>• Identify replacements in text clearly, for example with [brackets] or using XML tags such as &lt;seg&gt;word to be anonymised&lt;/seg&gt;.</li> <li>• Create an anonymisation log (also known as a de-anonymisation key) of all replacements, aggregations or removals made and store such a log securely and separately from the anonymised data files.</li> </ul>

Source: Tour guide on data management of the CESSDA<sup>21</sup>

With that in mind, the following table presents the data collected/generated during the course of the project that will be made openly available. In case certain data cannot be shared (or need to be shared under restrictions), a justification for that choice is provided.

*Table 5: Data availability*

No	Data	Availability	Notes
1	Current status of relevant stakeholders	Open & closed	Any personal information data will be aggregated/ anonymized before becoming openly available.
2	Farmers', rural communities' and consumers' needs, socio-economic context and framework conditions	Open & closed	Any personal information data will be aggregated/ anonymized before becoming openly available.
3	Current status of value chains in Project focal regions	Open	It is envisaged that data underpinning the mapping activities may be made available in a pseudonymized format. Some of the data may be aggregated in the deliverable report D1.3
4	Data from available inventories and tools	Open	-

<sup>21</sup> Retrieved from: <https://www.cessda.eu/Research-Infrastructure/Training/Expert-Tour-Guide-on-Data-Management/5.-Protect/Anonymisation>

No	Data	Availability	Notes
5	Generated info sheets on small-scale biobased technologies	Open	-
6	Generated info sheets on business models	Open	-
7	Generated info sheets on social innovations	Open	-
8	Key stakeholders' data on info sheets	Closed	These data are for internal use of the task only (e.g., to contact the stakeholders or to further analyze their remarks)
9	Efficient and cost-effective nutrient recycling practices	Open	-
10	Co-creation workshop material	Open	-
11	Co-creation Workshop Personal data	Closed	The personal data of the people involved in the co-creation process will not be published since it is personal information. The data will be only used by the project partners to contact them in the project context.
12	Feedback for the development of decision-making model	Open	-
13	Material from relevant Projects' toolkits	Open	-
14	"Catalogue of small-scale bio-based technologies, business models and social innovations" data	Open	-
15	"Collection of best practices for improved nutrient recycling" data	Open	-
16	"BioForum" data	Open	-
17	"Decision Support System" data	Open	-
18	"Bioeconomy Repository" data	Open	-
19	"Tool Library" data	Open	-
20	Promising cases and needs	Open	-
21	Generated tailored innovation roadmaps	Open	-
22	Capacity building workshop material	Open	-

No	Data	Availability	Notes
23	Capacity building workshop personal data	Open	-
24	Partners' Portfolio of Technical and Business services	Open	The access to the portfolio of services to be delivered is open since the deliverables D2.3 and D2.6, which contain the innovation support services are public deliverables.
25	Networking events and demo days material	Open	-
26	Networking events and demo days personal data	Closed	Personal data will be kept closed according to GDPR. At registration for events/workshop, individual consent forms will be formulated for each specific event and collected from each participant. Forms will be stored according to GDPR requirements.
27	Campaigns material	Open	Campaign materials are envisaged to be publicly available. It is not envisaged that data will be collected
28	Generated action plan per MIP	Open	The generated action plan per MIP can be available. It is not envisaged that data will be collected
29	Performance and impact	Open	-
30	Regional scale up workshop material	Open	The material does not contain personally identifiable data or sensitive information.
31	Regional scale up workshop personal data	Closed	Personal data of participants will remain closed, as well as confidential information of SMEs. Aggregated statistics may be published for promotion and reporting purposes.
32	Learning workshops material	Open	-
33	Learning workshops personal data	Closed	Personal data will be kept closed according to GDPR. At registration for events /workshops, individual consent forms will be formulated for each specific event and collected from each participant. Forms will be stored according to GDPR requirements.
34	Policy Insights set	Open	-

No	Data	Availability	Notes
35	MainstreamBIO Replication Guide data	Open	-
36	MainstreamBIO Replication Toolkit data	Open	-
37	Insights from EU policy roundtable	Open	-
38	Data collected for practice abstracts using EIP-AGRI format	Open	-
39	Data collected for audio-visual material	Open	-
40	Website analytics	Open & Closed	Website analytics will be available only to MainstreamBIO consortium and the EU Commission. In cases where statistics were shared, data were aggregated and anonymized before being made openly available (e.g., reported in the publicly available Dissemination and Communication Plan of the project), while personal data were treated as expected by the GDPR.
41	Social media statistics	Open & Closed	Social media analytics will be available only to MainstreamBIO consortium and the EU Commission. In cases where statistics were shared, data were aggregated and anonymized before being made openly available (e.g., reported in the publicly available Dissemination and Communication Plan of the project), while personal data were treated as expected by the GDPR. Specific types of social media analytics (e.g., number of followers) are publicly available on the project's SMAs.
42	Project events data	Open & Closed	Personal data of participants will remain closed, as well as confidential information of SMEs. Aggregated statistics may be published for promotion and reporting purposes.
43	Newsletter subscriptions	Closed	Data from newsletter subscriptions will remain closed as it contains personal information and is useful only for internal reporting purposes.
44	Data from dissemination and communication activities	Open & Closed	Data collected from dissemination actions will be available only to MainstreamBIO consortium and the EU Commission. In

No	Data	Availability	Notes
			cases there is a need to share information for dissemination and communication purposes through the project's website and social media accounts, any personal information will be anonymized before being made openly available. In cases where photos of participants are shared online, it will be done in the framework of a project's activity or after having the consent of participants.
45	Business models Analytics	Open & Closed	The access to the initial business models for the MIP will be open since they will be included on D5.2 (public deliverable). On the other hand, the final definition of the business plans for the MIP should have limited access limited since it could include sensitive information for the MIP exploitation.
46	AB feedback	Open	-
47	AB Member list	Open	-
48	Material collected from Project management and coordination	Open & Closed	Partners' personal data collected are going to be used only by the consortium for its coordination and communication needs

**It is important to note that all personal data collected / generated will be considered as closed data prior to their anonymisation and aggregation to safeguard the confidentiality of the data subjects.**

### **Data accessibility and availability**

Public access to the open data will be made available and free of charge through Zenodo, which will automatically link to OpenAIRE. The data will be fully accessible thanks to the included metadata and the search facility available on Zenodo. At the same time, closed data are intended to be stored and shared amongst authorised members of the consortium through cloud storage and file sharing providers which constitute structures that maintain and manage data and make these data accessible over a network, usually the internet (i.e., Google Drive). Before starting using these cloud services from providers situated both inside and outside the EEA, we have ensured that they comply with the relevant GDPR requirements.

The following table presents where data will be made accessible in the context of MainstreamBIO.

Table 6: Data accessibility

No	Data	Notes
1	Current status of relevant stakeholders	Through Zenodo and website
2	Farmers', rural communities' and consumers' needs, socio-economic context and framework conditions	The open data will be available on Zenodo, whereas the closed data will be shared in the cloud storage
3	Current status of value chains in Project focal regions	It is envisaged that pseudonymized data underpinning the mapping activity may be made available through Zenodo
4	Data from available inventories and tools	MainstreamBIO digital toolkit
5	Generated info sheets on small-scale biobased technologies	MainstreamBIO digital toolkit
6	Generated info sheets on business models	MainstreamBIO digital toolkit
7	Generated info sheets on social innovations	MainstreamBIO digital toolkit
8	Key stakeholders' data on info sheets	No access to the dataset
9	Efficient and cost-effective nutrient recycling practices	Through the website
10	Co-creation workshop material	Through the website
11	Co-creation Workshop Personal data	No access to the dataset (personal data)
12	Feedback for the development of decision-making model	Through Zenodo
13	Material from relevant Projects' toolkits	MainstreamBIO digital toolkit
14	"Catalogue of small-scale bio-based technologies, business models and social innovations" data	MainstreamBIO digital toolkit
15	"Collection of best practices for improved nutrient recycling" data	MainstreamBIO digital toolkit
16	"BioForum" data	MainstreamBIO digital toolkit
17	"Decision Support System" data	MainstreamBIO digital toolkit
18	"Bioeconomy Repository" data	MainstreamBIO digital toolkit
19	"Tool Library" data	MainstreamBIO digital toolkit
20	Promising cases and needs	Through Zenodo
21	Generated tailored innovation roadmaps	Through Zenodo and website
22	Capacity building workshop material	MainstreamBIO digital toolkit

No	Data	Notes
23	Capacity building workshop personal data	No access to the dataset (personal data)
24	Partners' Portfolio of Technical and Business services	Accessible as public deliverables through the project website, CORDIS and Zenodo if possible.
25	Networking events and demo days material	Will be open to members of MIP, project partners, social media/homepage and other members of FBCD if agreed upon within the project group.
26	Networking events and demo days personal data	No access to the dataset (personal data)
27	Campaigns material	It is not envisaged that data will be generated from the task. It is envisaged that the materials themselves will be made accessible through the project website, YouTube channel etc. and summarized through D3.4
28	Generated action plan per MIP	It is not envisaged that data will be generated from the task. It is envisaged that the action plans will be summarized in D3.4
29	Performance and impact	Through Zenodo
30	Regional scale up workshop material	Through the website
31	Regional scale up workshop personal data	No access to the dataset (personal data)
32	Learning workshops material	Will be open to members of MIP, project partners, social media/homepage and other members of FBCD if agreed upon within the project group.
33	Learning workshops personal data	No access to the dataset (personal data)
34	Policy Insights set	Through the website
35	MainstreamBIO Replication Guide data	Through the website
36	MainstreamBIO Replication Toolkit data	Through the website
37	Insights from EU policy roundtable	Through the website

No	Data	Notes
38	Data collected for practice abstracts using EIP-AGRI format	Through Zenodo, website
39	Data collected for audio-visual material	Through Zenodo, website
40	Website analytics	The open data will be available on Zenodo, whereas the closed data will be shared in the cloud storage
41	Social media statistics	The open data will be available on Zenodo, whereas the closed data will be shared in the cloud storage
42	Project events data	The open data will be available on Zenodo, whereas the closed data will be shared in the cloud storage
43	Newsletter subscriptions	Available only within the consortium through the cloud storage for closed data
44	Data from dissemination and communication activities	The open data will be available on Zenodo, whereas the closed data will be shared in the cloud storage
45	Business models Analytics	The access to the business models is guaranteed because the deliverable 5.2 is public (publication on the project website, Cordis, Zenodo). The access to the definitive business plans will be limited.
46	AB feedback	Through Zenodo
47	AB Member list	Through Zenodo and website
48	Material collected from Project management and coordination	Through Zenodo

### Restrictions on use

By utilising Zenodo for sharing the project's openly available data, MainstreamBIO can apply **different levels of accessibility** for this data taking into account any relevant issues (such as ethical, rules of personal data, intellectual property, commercial, privacy-related, security-related, etc.).

More specifically, **Zenodo offers the following levels of data accessibility:**

- **Open access:** Data remains available for re-use. Nevertheless, the level in which this data can be re-used is determined also by their accompanied licence for re-use (see subsection 3.4.3).

- **Embargoed status:** Access to the data will be restricted until the end of the embargo period, at which time, the content will automatically become publicly available.
- **Restricted access:** The data will not be made publicly available and sharing will be made possible only by the approval of the project partner that have the responsibility of the data.
- **Closed access:** The data is protected against unauthorized access at all levels and only members of the consortium have the right to access it.

**Project partners will mainly use the open access level** to disseminate the project's data amongst the interested stakeholders. Data that will not be available for re-use will be accessible only by authorised partners of MainstreamBIO's consortium and /or authorised personnel from the funding authority of the project.

Moreover, **MainstreamBIO will ensure open access to all peer-reviewed scientific publications** that may be produced in the framework of the project. In particular, according to the Grant Agreement, MainstreamBIO will:

- At the latest at the time of publication, deposit a machine-readable electronic copy of the published version or final peer-reviewed manuscript accepted for publication in a trusted repository for scientific publications.
- Ensure immediate open access to the deposited publication — via the repository — under the latest available version of the Creative Commons Attribution International Public Licence (CC BY) or a licence with equivalent rights. Moreover, for monographs and other long-text formats, the licence may exclude commercial uses and derivative works (e.g., CC BY-NC, CC-BY-ND).
- Ensure information is given – via the repository – about any research output or any other tools and instruments needed to validate the conclusions of the scientific publication.

Beneficiaries (or authors) must retain sufficient intellectual property rights to comply with the open access requirements.

### ***Identity ascertainment and data access committee***

The identity of stakeholders who want to access the data on Zenodo is not necessary to be ascertained, as the uploaded on Zenodo data are publicly open and no authorization is needed. On the other hand, closed for the public data will be available only to authorized consortium partners through dedicated mechanisms provided by the cloud storage service employed by the respective partners in order to deposit the data. As further elaborated in Section 6 of this DMP, technical access controls are built into the MainstreamBIO website and will be built into its toolkit as well, in order to ascertain the identity and access rights of those who want to access the data.

The need for a data access committee to evaluate or approve access requests to personal data, is not foreseen because only authorized partners will have access to the project's closed data, accessible only by using their credentials (username/password), and no third-party will re-use them for their benefit.

## **3.2.3 Metadata**

### ***Availability and licences***

Metadata of deposited publications generated in the context of MainstreamBIO will be **open under a Creative Common Public Domain Dedication (CC 0)** or equivalent, in line with the FAIR principles for data management adopted by the project (in particular machine-actionable). Such **metadata will provide information, at least, about the following:**

- The publication at hand (author(s), title, date of publication, publication venue);
- Reference to the Horizon Europe funding;
- The name of the project, including its acronym and Grant Agreement number;
- Any particular licensing terms which may apply (depending on the chosen license);
- Persistent identifiers that have been attributed to the publication;
- Authors involved in the action, their organisations and the project itself.

Where applicable, the metadata will also include persistent identifiers for any research output or any other tools and instruments needed to validate the conclusions of the publication. The metadata will be available through Zenodo. It is quite unlikely that Zenodo will terminate its operation and stop providing its services, but in such a case all data, metadata, code and documentation uploaded will be transferred and hosted to other suitable repositories without undue delay. In this respect, it is important to note that, since all of MainstreamBIO's openly available data will make use of PIDs (i.e., DOIs), which is further elaborated in subsection 3.1.1, the links to the data will not be affected. In parallel, the project's data that will not be openly available for sharing will be deposited, together with their accompanying metadata, code and documentation (if necessary), to the cloud web storage service employed by the project.

### **Methods, Software tools and documentation to access the data**

MainstreamBIO emphasises the accessibility of the data collected / generated during the project. With that in mind, no specialised method, software tool and / or documentation is expected to be needed at the moment, in order to access the data. Stakeholders will have the ability to access the data by simply using their web browser (e.g., Mozilla, Google Chrome, Internet Explorer, Safari, etc.) through their computers (either desktop or laptop), smart phones and/or tablets.

More specifically, they first need to access Zenodo through its webpage (following the link <https://zenodo.org/>) and utilise the search engine of the repository to search for interesting data. By typing the name of the project (or any other relevant keyword connected to the MainstreamBIO data) the search engine will direct the user to the project's data, ready to be explored and re-used. Moreover, since the data will be available in open formats, we will be ensuring that they can appropriately be read by a range of different software that are widely and freely accessible to all potential users of the data.

Closed data will only be accessed by authorised project partners through usage of a cloud storage service. Again, no specialised method, software tool and / or documentation is needed to this end.

As it was further elaborated in subsection 3.2.1, if Zenodo terminates its operation and stop providing its services, in such a case all data, metadata, code and documentation uploaded will be transferred and hosted to other suitable repositories without undue delay.

Along these lines, this section has provided the methodology applied in the frame of MainstreamBIO to ensure that its data is as openly accessible as possible by any stakeholder that may find it interesting for re-use. In this context, MainstreamBIO also focuses on providing metadata standards and appropriate metadata vocabularies to increase data interoperability. The following section provides further details in this respect.

## **3.3 Making data interoperable**

Data interoperability refers to the ability of systems and services that create, exchange and use data

to have clear, shared expectations for the contents, context and meaning of that data<sup>22</sup>. With that in mind, MainstreamBIO has adopted in its data management methodology the use of metadata vocabularies, standards and methods that will increase the interoperability of the data collected/generated through its activities.

More specifically, **the interoperability of the data that will not be publicly shared will be facilitated by the use of the Dublin Core Metadata standard**. This standard is a small “metadata element set” which accounts for issues that must be resolved in order to ensure that data meet traditional standards for quality and consistency, while still remaining broadly interoperable with other data sources in the linked data environment. The fifteen elements of the standard provide a vocabulary of concepts with natural-language definitions (e.g., title, creator, author, etc.) that are instantly converted into open machine-readable formats (such as XML, HTML, etc.), enabling machine-processability. Each element is optional and may be repeated, while the standard itself offer ways exist for refining them, encouraging the use of encoding and vocabulary schemes. The vocabulary of the Dublin Core Metadata standard is presented by the following table<sup>23</sup>:

*Table 7: Dublin core Metadata standard vocabulary*

No	Element	Element definition
1	Title	A name given to the resource.
2	Creator	An entity primarily responsible for making the content of the resource.
3	Subject	The topic of the content of the resource.
4	Description	An account of the content of the resource.
5	Publisher	An entity responsible for making the resource available.
6	Contributor	An entity responsible for making contributions to the content of the resource.
7	Date	A date associated with an event in the life cycle of the resource
8	Type	The nature or genre of the content of the resource.
9	Format	The physical or digital manifestation of the resource.
10	Identifier	An unambiguous reference to the resource within a given context.
11	Source	A reference to a resource from which the present resource is derived.
12	Language	A language of the intellectual content of the resource.

<sup>22</sup> L. Steele & T. Orrell (2017). The frontiers of data interoperability for sustainable development. Publish What You Fund and Development Initiatives

<sup>23</sup> Sugimoto, S., Baker, T., & Weibel, S. L. (2002). Dublin Core: Process and Principles. Lecture Notes in Computer Science Digital Libraries: People, Knowledge, and Technology, 25-35.

No	Element	Element definition
13	Relation	A reference to a related resource.
14	Coverage	The extent or scope of the content of the resource.
15	Rights	Information about rights held in and over the resource.

Along similar lines, **the interoperability of openly available data will be facilitated through Zenodo**, which adopts community- endorsed practices, since its metadata are stored internally in JSON format according to a defined JSON schema. This encloses HTML microdata that allows machine-readable data to be embedded in HTML documents in the form of nested groups of name-value pairs. Moreover, the JSON schema provides a collection of shared vocabularies in microdata format that can be used to mark-up pages in ways that can be understood by major search engines.

**MainstreamBIO's data will offer qualified references to other data.** A qualified reference is a cross-reference that explains its intent. For example, X is regulator of Y is a much more qualified reference than X is associated with Y, or X see also Y. Our goal is to create as many meaningful links as possible between (meta)data resources to enrich the contextual knowledge about the data, balanced against the time/energy involved in making a good data model. To be more concrete, our references will specify if one dataset builds on another data set, if additional datasets are needed to complete the data, or if complementary information is stored in a different dataset. The links between the datasets will also be described and, all datasets will be properly cited, including their persistent identifiers.

## 3.4 Increase data re-use

### 3.4.1 *Documentation for validating data analysis and facilitating data re-use*

By utilising Zenodo for sharing the project's openly available data, MainstreamBIO ensures the facilitation of data access, validation and re-use, in compliance to the general policies of Zenodo regarding content, access and reuse. More specifically, the following principles are followed by Zenodo to make data re-useable according to the FAIR principles<sup>24</sup>:

- R1: (meta)data are richly described with a plurality of accurate and relevant attributes

Each record contains a minimum of DataCite's mandatory terms, with optionally additional DataCite recommended terms and Zenodo's enrichments.

- R1.1: (meta)data are released with a clear and accessible data usage license

License is one of the mandatory terms in Zenodo's metadata, and is referring to an Open Definition license. Data downloaded by the users is subject to the license specified in the metadata by the uploader.

- R1.2: (meta)data are associated with detailed provenance

---

<sup>24</sup> Retrieved from: <https://about.zenodo.org/principles/>

All data and metadata uploaded is traceable to a registered Zenodo user. Metadata can optionally describe the original authors of the published work.

- R1.3: (meta)data meet domain-relevant community standards

Zenodo is not a domain-specific repository, yet through compliance with DataCite's Metadata Schema, metadata meets one of the broadest cross-domain standards available.

### 3.4.2 License schemes to permit the widest use possible

Data will be made freely available in the public domain to permit the widest re-use possible. Moreover, the application of a licence to MainstreamBIO's open data is a simple way to ensure that any interested third-party can re-use it. In this context, licences are the instrument which permit a third-party to copy, distribute, display and/or modify the project's data only for the purposes that are set by the licence. Licences typically grant permissions on condition that certain terms are met. While the precise details vary, three conditions are commonly found in licences which are the attribution, non-derivative, and non-commerciality.

Along these lines, MainstreamBIO publishes openly available data under the **Creative Commons licencing scheme** to foster their re-use and build an equitable and accessible environment for them. Zenodo provides MainstreamBIO the **opportunity to publish its open data under five Creative Common licences** as follows:

- **Creative commons Attribution-Share Alike 4.0 (CC BY-SA 4.0)** according to which any third party can freely copy, distribute, display and modify the datasets for any purpose. Remix, transform, or built upon data, must be distributed under the same license as the original. Third parties must give appropriate credit, provide a link to the license, and indicate if changes were made.
- **Creative Commons Attribution 4.0 International (CC BY 4.0)** according to which any third party can freely copy, distribute, display and modify the datasets for any purpose. Third parties must give appropriate credit, provide a link to the license, and indicate if changes were made.
- **Creative Commons Attribution-No Derivatives 4.0 International (CC BY-ND 4.0)** during which any third party can freely copy, distribute, display and modify the datasets for any purpose. Remix, transform, or built upon data, however, must not be distributed. Third parties must give appropriate credit, provide a link to the license, and indicate if changes were made.
- **Creative Commons Attribution-NonCommercial 4.0 International (CC BY-NC 4.0)** based on which third parties can copy, distribute, display and modify the datasets for any purpose other than commercial unless they get a permission by project partners first. Third parties must give appropriate credit, provide a link to the license, and indicate if changes were made.
- **Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International (CC BY-NC-ND 4.0)** according to which third parties can copy, distribute, display and modify the datasets for any purpose other than commercial unless they get a permission by project partners first. Remix,

Figure 2: CC BY-SA 4.0

Figure 3: CC BY 4.0

Figure 4: CC BY-ND 4.0

Figure 5: CC BY-NC 4.0

Figure 6: CC BY-NC-ND 4.0

transform, or built upon data, however, must not be distributed. Third parties must give appropriate credit, provide a link to the license, and indicate if changes were made.

Different licensing schemes may be selected to better fit the need of MainstreamBIO's open data ensuring not only their long-term preservation and re-use but also the interests of the consortium along with the rights of individuals for whom the data is about. In such a case, this subsection of the DMP will be updated accordingly.

### 3.4.3 Availability for re-use

The re-use of data is a key component of MainstreamBIO's methodology for making data FAIR. In fact, making data available for re-use ensures interested stakeholders, other than project partners, can benefit from this data, contributing towards maximising the impact of the project. **Rich metadata** created based on metadata standards that enable proper discovery as well as **appropriate licensing schemes facilitate the re-use of MainstreamBIO's open data**, allowing them to find valuable utility even after the end of MainstreamBIO project.

In principle, it is expected that data will become available for re-use no later than 120 days after the end of its processing in the framework of the project (i.e., collection, anonymisation, aggregation, etc.) to ensure that any additional data management activities required to this end do not compete with the timely delivery of the project's planned outputs.

With that in mind, the expected time that MainstreamBIO's data will be made openly accessible and uploaded to Zenodo is indicatively provided in the following table:

*Table 8: Expected time that data will be made open through Zenodo<sup>25</sup>*

No	Data	Expected time for making data open	Notes
1	Current status of relevant stakeholders	30/02/2023	After approval of the respective deliverable.
2	Farmers', rural communities' and consumers' needs, socio-economic context and framework conditions	31/05/2023	After approval of the respective deliverable or 3-months after submission based on an agreement with the EC. Any sensitive private and business information will not be publicly available.
3	Current status of value chains in Project focal regions	01/05/2023	It is envisaged this may be made available following completion of the report. However, should we plan to publish the results/data in per review this may be delayed.

<sup>25</sup> This timetable is based on expectations and may be modified during the course of the project taking into account any unforeseen risk that may occur.

No	Data	Expected time for making data open	Notes
4	Data from available inventories and tools	31/08/2023	When Task 2.4 is completed
5	Generated info sheets on small-scale biobased technologies	28/02/2023	When Task 2.1 is completed

43	Newsletter subscriptions	N/A	This data will contain sensitive private and business information and

No	Data	Expected time for making data open	Notes
			cannot be made public. Available only within the consortium.
44	Data from dissemination and communication activities	31/07/2025	After approval of the respective deliverable.
45	Business models Analytics	29/02/2024	Business models to be published together with the D5.2 submission. Business plans will not be published.
46	AB feedback	31/03/2024	After the respective activities
47	AB Member list	31/12/2022	After the formation of the list
48	Material collected from Project management and coordination	N/A	After approval of the respective deliverables

### 3.4.4 Data provenance

Data provenance is the documentation of where a piece of data comes from and the processes and methodology by which it was produced. Put simply, provenance answers the questions of why and how the data was produced, as well as where, when and by whom<sup>26</sup>. Accurately recording data provenance is a cornerstone of good data management. MainstreamBIO will use specific elements of the **Dublin Core Metadata Standards**<sup>27</sup> and the **W3C Provenance Data Model**<sup>28</sup>, to generate specific text files (e.g., README) that will accurately capture the history of each data entity throughout its versions (e.g., based on the DOI versioning Zenodo provides)<sup>29</sup>.

### 3.4.5 Data quality assurance processes

**Quality Assurance** (QA) and **Quality Control** (QC) activities are an integral part of MainstreamBIO's data management methodology and are implemented prior to the publication of any data to Zenodo, safeguarding the transparency, consistency, comparability, completeness and accuracy of the data.

**QA** is a planned system of review procedures conducted outside the framework of developing a dataset, by personnel not directly involved in the dataset development process<sup>30</sup>. In the context of

<sup>26</sup> <https://ardc.edu.au/resource/data-provenance/>

<sup>27</sup> [https://www.dublincore.org/resources/userguide/creating\\_metadata/#Provenance](https://www.dublincore.org/resources/userguide/creating_metadata/#Provenance)

<sup>28</sup> <https://www.w3.org/TR/prov-dm/>

<sup>29</sup> <https://help.zenodo.org/>

<sup>30</sup> 2006 IPCC Guidelines for National Greenhouse Gas Inventories, Vol. 1 General Guidance and Reporting, CHAPTER 6 Quality Assurance / Quality Control and Verification.

MainstreamBIO, it takes the form of **peer-reviews of methods and/or data summaries** to assess the quality of the dataset and identify any need for improvement, ensuring that the dataset correctly incorporates the scientific knowledge and data generated.

**QC** is defined as a system of checks to assess and maintain the quality of the dataset being compiled<sup>31</sup>. The relevant procedures of MainstreamBIO are designed to provide routine technical checks as they measure and control data consistency, integrity, correctness and completeness as well as identify and address errors and omissions. In this context, QC checks cover everything from data acquisition and handling, application of approved procedures and methods, and documentation. Some of the general quality checks undertaken in the framework of the project include checking (i) for transcription errors in data input; (ii) that scale measures are within the range of acceptable values; and (iii) whether proper naming conventions are used.

---

<sup>31</sup> 2006 IPCC Guidelines for National Greenhouse Gas Inventories, Vol. 1 General Guidance and Reporting, CHAPTER 6 Quality Assurance / Quality Control and Verification.

## 4. Other research outputs

At the moment of elaborating the initial version of MainstreamBIO's Data Management Plan, no other research outputs have been identified and are expected to be generated or re-used in the context of the project.

## 5. Allocation of resources

### 5.1 Estimated costs for making data FAIR

The costs required for making the data collected/generated during MainstreamBIO's activities FAIR are integrated in the budget of the project. With that in mind, the table which follows provides an overview of the estimated costs of making data FAIR as well as their budget source within the framework of MainstreamBIO.

*Table 9: Estimated costs for making data FAIR*

No	Data Processing / Management activity	Budget source	Total estimated effort in Person Months <sup>32</sup>	Total estimated cost in Euro <sup>33</sup>
1	Collection	Budget allocated to the WP under which the respective data are processed	30,11	161.969,64 €
2	Documentation	Budget allocated to the WP under which the respective data are processed	7,53	40.492,41 €
3	Storage	Budget allocated to the WP under which the respective data are processed	3,76	20.246,20 €
4	Access and security	Budget allocated to the WP under which the respective data are processed	3,76	20.246,20 €
5	Preservation	Budget allocated to the WP under which the respective data are processed	1,88	10.123,10 €
6	Availability and re-use	Budget allocated to the WP under which the respective data are processed	11,29	60.738,61 €
7	Overall data management	WP6	3,95	21.249,50 €
			<b>Total</b>	<b>335.065,68 €</b>

<sup>32</sup> The total estimated effort for each data processing / management activity reflects the cumulative effort for the implementation of the respective activity for all data collected / generated across the different WPs of MainstreamBIO.

<sup>33</sup> The total cost of each data processing / management activity is calculated by multiplying the effort estimated for the respective activity with the weighted average cost of a person month in the framework of MainstreamBIO.

In order to produce the estimations of the costs for making data FAIR in the context of MainstreamBIO, a series of **assumptions** were made, taking into account the respective **guidelines** provided by the Research Data Management Support, a multidisciplinary network of data experts within Utrecht University<sup>34</sup>, as well as of the UK Data Service and its data management costing tool<sup>35</sup>. With that in mind, the estimated costs for making MainstreamBIO's data FAIR cover **data-related activities and resources across the data lifecycle**, spanning from collection and documentation through storage and preservation over to sharing and re-use.

In particular, costs for **data collection** cover activities necessary for acquiring external datasets (if required), gathering/generating new data, transcribing (if applicable), formatting and organising this data as well as acquiring informed consent from data subjects. This data processing activity reflects the majority of the costs required for making data FAIR as the majority of MainstreamBIO's data constitutes new data collected/generated over the course of the project. At the same time, **data documentation** costs address the effort required for describing data (e.g., marking data with variable and value labels, code descriptions, etc.) as well as creating well-defined metadata along with a meaningful description of the context and methodology of how data was collected/generated and processed (where necessary).

Costs for **data storage** include the resources required for ensuring adequate storage space for the data as well as the effort necessary for conducting data back-ups, while **data access and security** costs encompass costs related to ensuring access to the data as well as for protecting it from unauthorised access or use or from disclosure. Given that the storage of MainstreamBIO's data will not require the procurement of additional space (other than what is already available to project partners) as well as that no special measures or software are required to access and secure the data (other than what is inherently built in to the repositories of MainstreamBIO's data), such costs are kept to a minimum.

**Data preservation** costs, on the other hand, are estimated relatively higher than data storage, access and security costs, as additional effort will be required in several cases in order to convert the collected/generated data from their original form (e.g., physical interview transcripts) to an open and/or machine-readable format suitable for long-term preservation (e.g., to an .xlsx format.). Adequate effort for **data availability and re-use** costs is also foreseen to safeguard the appropriate digitisation and anonymisation of the data as well as cover any resources required for data sharing and cleaning. Along the same lines, appropriate effort is foreseen for **overall data management** as well, in order to cover the effort related with the operationalisation of data management in the framework of MainstreamBIO.

Finally, costs for **long-term preservation** in the framework of MainstreamBIO are assumed to be negligible, since the open data of the project will be hosted in the repository of Zenodo free of charge.

## 5.2 Data management responsibilities

For the effective, proper and secure handling of the data collected/generated in the frame of MainstreamBIO, specific data management roles have been established within the data

---

<sup>34</sup> Research Data Management Support. Guides: Costs of data management. Utrecht University. Retrieved from: <https://www.uu.nl/en/research/research-data-management/guides/costs-of-data-management>

<sup>35</sup> UK Data Service. Costing Data Management. Retrieved from: <https://www.ukdataservice.ac.uk/manage-data/plan/costing>

management methodology and procedures of the project. These responsibilities are outlined in this section of the DMP and are as follows.

**Project Coordinator (PC):** The PC, Q-PLAN, is responsible for overall data management in the framework of MainstreamBIO, including the elaboration of the DMP and its updates (when necessary along with support of all partners). At the same time, the PC is responsible for the elaboration of proper templates for the Informed Consent Form and the Data Subject Request Form to be appropriately adjusted and utilised by project partners during the relevant activities of the project as well as for drafting the project's Privacy Policy that has been uploaded on the project's website. The PC in collaboration with the relevant project partners (e.g., Task Leaders) will examine if additional specific privacy policies are required for certain project's tasks and will coordinate the elaboration of such privacy policies. Finally, the PC coordinates with Work Package Leaders, Task Leaders and Responsible Partners to determine whether and how the data collected / generated or re-used by the project are shared and become available for re-use, contributes to its quality assurance and uploads the project's openly available data to Zenodo.

**Work Package Leaders (WPL):** The WPL is responsible for coordinating the implementation of the data processing activities performed under the WPs they are leading. Moreover, they align with the PC and the respective Work Task Leader on whether and how the data gathered/produced under the tasks that fall within the WP they are leading will be shared and/or re-used. This includes the definition of access procedures as well as potential embargo periods along with any necessary software and/or other tools which may be required for data sharing and re-use. Finally, the WPL are the main responsible for assuring the quality of the data stemming from the activities of the WP they are leading, including assessing their quality and indicating any need for improvement to the respective Work Task Leaders.

**Work Task Leaders (WTL):** WTLs are responsible for the data collected / generated or re-used in the frame of the tasks that fall under their leadership as well as for safeguarding their appropriate and timely processing. Moreover, they are responsible for properly adjusting the Informed Consent Form and Data Subject Request Form templates, to the needs and specificities of the activities carried out in the task they are leading. WTLs are responsible for identifying the need for a specific privacy policy regarding the task they are leading and collaborate with the PC for drafting and releasing it to the public. Finally, they undertake any necessary actions to prepare the data collected / generated or re-used through the tasks they are leading for sharing either within the consortium or openly (including the use of proper naming conventions, application of suitable anonymisation techniques, creation of appropriate metadata and documentation, etc.).

**Partners:** All project partners are tasked to collect, digitise, anonymise, store, destroy and / or otherwise process data for the specific purpose of the activity in which it has been collected / generated or re-used within the project. They are responsible for appropriately collecting the necessary consent for processing data as well as for ensuring that the Informed Consent Form and the Data Subject Request Form used to this end are properly adjusted to the needs of the activity they are participating (including references to the project's Privacy Policy and any other applicable specific privacy policies) and, in any particularities, applicable to their organisation while ensuring adherence to provisions of relevant national data protection legislation in their respective country. Moreover, they are responsible for managing the consents they have collected with a view to demonstrating their compliance with the relevant applicable EU and national regulation(s). Finally, they perform quality checks to assess and maintain the quality of the dataset(s) held within their records.

**Data repositories:** Data repositories are tasked with the storage and long-term preservation of the project's data. In this respect, Zenodo will maintain and preserve the openly available data of MainstreamBIO, enabling its sharing and re-use. To this end, Zenodo assigns metadata and DOIs

to the data, while also taking all necessary measures to securely back-up the data and restore it, safeguarding its long-term preservation.

In this context, the following table illustrates the allocation of data management responsibilities amongst the members of the MainstreamBIO consortium per data collected/generated or re-used under each WP.

*Table 10: Data management responsibilities of MainstreamBIO's partner per data collected/generated under each WP*

WP	WPL	Data	Tasks	WTL	Responsible Partner
WP1	MTU	Current status of relevant stakeholders	Task 1.1	Q-PLAN	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Farmers', rural communities' and consumers' needs, socio-economic context and framework conditions	Task 1.2	WHITE	WHITE, MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Current status of value chains in Project focal regions	Task 1.3	MTU	MTU, WR, IUNG, FBCD, PROC, AUP, INNV
WP2	WR	Data from available inventories and tools	Task 2.1	WR	All Partners involved in the WP
		Generated info sheets on small-scale biobased technologies	Task 2.1	WR	WR
		Generated info sheets on business models	Task 2.1	WR	INNV
		Generated info sheets on social innovations	Task 2.1	WR	WHITE
		Data from key stakeholders	Task 2.1	WR	All Partners involved in the WP
		Efficient and cost-effective nutrient recycling practices	Task 2.2	IUNG	IUNG
		Co-creation workshop material	Task 2.3	WHITE	WHITE
		Co-creation Workshop Personal data	Task 2.3	INNV	All partners involved in the WP
		Feedback for the development of decision-making model	Task 2.4	WR	WR
		Material from relevant Projects'	Task 2.5	DRAXIS	Q-PLAN
		"Catalogue of small-scale bio-based technologies, business models and social innovations" data	Task 2.5	DRAXIS	DRAXIS, WR, INNV, WHITE
"Collection of best practices for improved nutrient recycling" data	Task 2.5	DRAXIS	DRAXIS, IUNG		

WP	WPL	Data	Tasks	WTL	Responsible Partner
		“BioForum” data	Task 2.5	DRAXIS	DRAXIS
		“Decision Support System” data	Task 2.5	DRAXIS	DRAXIS, WR, INNV, IUNG, WHITE, MTU
		“Bioeconomy Repository” data	Task 2.5	DRAXIS	DRAXIS, Q-PLAN
		“Tool Library” data	Task 2.5	DRAXIS	DRAXIS, Q-PLAN
WP3	INNV	Promising cases and needs	Task 3.1	PROC	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Generated tailored innovation roadmaps	Task 3.1	PROC	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Capacity building workshop material	Task 3.2	DRAXIS	DRAXIS, MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Capacity building workshop personal data	Task 3.2	DRAXIS	DRAXIS, MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Partners’ Portfolio of Technical and Business services	Task 3.3	INNV	All Partners
		Networking events and demo days material	Task 3.4	FBCD	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Networking events and demo days personal data	Task 3.4	FBCD	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Campaigns material	Task 3.5	MTU	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Generated action plan per MIP	Task 3.5	MTU	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
WP4	FBCD	Performance and impact	Task 4.1	Q-PLAN	Q-PLAN, MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Regional scale up workshop material	Task 4.2	WHITE	WHITE, MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Regional scale up workshop personal data	Task 4.2	WHITE	WHITE, MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Learning workshops material	Task 4.3	FBCD	MTU, WR, IUNG, PROC, AUP, FBCD, INNV

WP	WPL	Data	Tasks	WTL	Responsible Partner
		Learning workshops personal data	Task 4.3	FBCD	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Policy Insights set	Task 4.4	IUNG	IUNG, Q-PLAN, MTU, WR, AUP, FBCD, INNV, DRAXIS, WHITE
		MainstreamBIO Replication Guide data	Task 4.4	IUNG	IUNG, Q-PLAN, MTU, WR, AUP, FBCD, INNV, DRAXIS, WHITE
		MainstreamBIO Replication Toolkit data	Task 4.4	IUNG	IUNG, Q-PLAN, MTU, WR, AUP, FBCD, INNV, DRAXIS, WHITE
		Insights from EU policy roundtable	Task 4.4	IUNG	IUNG, Q-PLAN, MTU, WR, AUP, FBCD, INNV, DRAXIS, WHITE
		Data collected for practice abstracts using EIP-AGRI format	Task 4.5	AUP	MTU, WR, IUNG, PROC, AUP, FBCD, INNV
		Data collected for audio-visual material	Task 4.5	AUP	MTU, WR, IUNG, PROC, AUP, FBCD, INNV

		AB Member list	Task 6.2	Q-PLAN	Q-PLAN
		Material collected from Project management and coordination	All WP6 Tasks	Q-PLAN	Q-PLAN

## 6. Data security

MainstreamBIO will securely handle any collected / generated or re-used data throughout its entire lifecycle as it is essential to safeguard this data against accidental loss and / or unauthorised access. To achieve this the project will apply appropriate technical and organisational measures based on a risk assessment of the relevant data that takes into account the impact and the likelihood of a potential data breach. With that in mind, the project's data security strategy aims at minimizing the probability that a data breach will occur during the course and after the completion of MainstreamBIO, resulting either from human error or hardware failure, as well as inhibit any unauthorised access. Particularly, in case of personal data collection / generation it is crucial that **this data can only be accessible by those authorised to do so.**

All project partners are responsible for processing<sup>36</sup> data using appropriate means, such as private servers or cloud service providers that adhere to the relevant legal data protection requirements (e.g. GDPR) and will ensure that this **data is protected**, and any **necessary data security controls have been implemented**, to minimize the risk of information leak and destruction. This case refers to the data that will be closed and therefore will not be shared and / or re-used within the framework of the project. In this case, to minimize the consequences of potential data losses, the data will be **backed up at regular time intervals based on change frequency and criticality. The backed-up files will be stored in appropriate storage media including external hard drives, flash drives, NAS devices and reputable cloud services**, so as to safeguard their preservation, while also enabling their recovery at any time. Moreover, **integrity checks**<sup>37</sup> will be carried out regularly ensuring that the stored data has not been changed or corrupted.

**Access to closed data will only be permitted to authorised project partners. In case there is a personal data breach, the responsible project partner will notify, without undue delay and, where feasible, no later than 72 hours after having become aware of it, its competent national supervisory authority (e.g., data protection authority) as well as the data subject(s) that may be affected by the breach. Moreover, the responsible partner will document any personal data breaches, including information such as the facts relevant to the breach, its effects and the remedial action(s) taken.**

**Identification and authentication access controls play an important role** in the context of the project, as they help partners to protect the data collected / generated or re-used during MainstreamBIO and especially personal data. To this end, each project partner is responsible for and committed to ensuring the application of appropriate access controls to the data they are processing. At the same time, **technical access controls are built into the MainstreamBIO website and will be built into the MainstreamBIO toolkit as well**, setting out clear roles with access rights to the data stored there, so that only authorised personnel have access. Each project partner will be provided with unique accounts containing one or more roles assigned to them and at

---

<sup>36</sup> Processing, according to Regulation (EU) 2016/679 of the European Parliament (General Data Protection Regulation), means any operation or set of operations which is performed on personal data or on sets of personal data, whether or not by automated means, such as collection, recording, organisation, structuring, storage, adaptation or alteration, retrieval, consultation, use, disclosure by transmission, dissemination or otherwise making available, alignment or combination, restriction, erasure or destruction.

<sup>37</sup> An integrity check is the process of comparing the current state of stored data and/or programs to a previously recorded state in order to detect any changes.

the same time enforcing role-based security when its staff processes the project's data. These accounts are expected to be username / password protected, maximising access control. Finally, in order to safeguard the privacy of the users of the MainstreamBIO website and the MainstreamBIO toolkit, dedicated **privacy policies** will define the way in which these online spaces collect, process and use personal data, the security procedures followed, the users' rights as well as the cookies policy employed.

On another note, openly available data will be stored safely for long-term preservation on Zenodo, in the same cloud infrastructure as research data from CERN's Large Hadron Collider, using CERN's battle-tested repository software INVENIO, which is used by some of the world's largest repositories (such as INSPIRE HEP and the CERN Document Server). Along these lines, data is stored and backed-up in CERN's EOS service in an 18 petabytes disk cluster. Both data files and metadata are kept in multiple online replicas and independent replicas ensuring their long-term preservation as well as their recovery when necessary. Moreover, for each file two independent MD5 checksums are stored. One checksum is stored by INVENIO, used to detect changes to files made from outside of it whereas the other checksum is stored by EOS, and used for automatic detection and recovery of file corruption on disks. In this context, access control is applied by the different level of openness that Zenodo allows (i.e., open, restricted and closed).

## 7. Ethics and other issues

This Chapter addresses the ethical aspects of the MainstreamBIO's Data Management Plan and the ethical compliance of the underlying data foreseen to be collected / generated or re-used under the project's activities. The project will process data that is not included in any special category of personal data (i.e., non-sensitive data) according to the relevant data protection legislation (e.g., GDPR). In accordance with the **Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 (GDPR)**, all personal data processed for project's activities shall be:

- processed lawfully, fairly and in a transparent manner in relation to the data subject;
- collected for specified, explicit and legitimate purposes relative to project's objectives and not further processed in a manner that is incompatible with those purposes;
- adequate, relevant and limited to what is necessary in relation to the purposes for which they are processed;
- accurate and, where necessary, kept up to date;
- kept in a form which permits identification of data subjects for no longer than is necessary for the purposes for which the personal data are processed;
- processed in a manner that ensures appropriate security of the personal data (see section 6).

For all personal data processing activities within the framework of the project at least one lawful basis as of Art. 6 GDPR applies. Where informed consent is chosen as the lawful basis for processing, all relevant provisions of the data protection legislation (e.g., Art.7 GDPR) are observed. Under this light, further details about the **scope of the activities that entail data collection/generation or re-use** in the frame of MainstreamBIO along with the procedures for identifying/recruiting suitable stakeholders to take part in them as well as for obtaining their informed consent are defined by the respective WP Leaders (MTU for WPI, WR for WP2, INNV for WP3, FBCD for WP4). Moreover, **personal data processing carried out by partners are in line with relevant EU and national regulations**. The project's Privacy Policy and the templates of the Informed Consent Form and the Data Subject Request Form, used in the implementation of the project's activities, are compliant with the General Data Protection Regulation and annexed to this DMP (see Annex). Last but not least, **no transfer of personal data outside the EU is foreseen as part of the project's implementation**. In case of data storage providers situated both inside and outside the EEA, partners are committed to ensure their compliance with the relevant GDPR requirements before start using their services.

It is important to highlight that each partner is responsible for ensuring that the templates for the Informed Consent Form and Subject Data Request Form (including references to the project's Privacy Policy and any other applicable specific privacy policies) are appropriately adjusted according to (i) the needs of the activity for which they are being used by them as well as to (ii) the relevant data protection laws and regulations applicable to their respective countries and / or organisation. All partners should keep records to demonstrate that data subjects have consented to the processing of their personal data and use consent management mechanisms that make it easy for individuals to withdraw their consent.

Finally, **no other national/funder/sectoral/departmental procedures for data management were used in the framework of MainstreamBIO**.

## 8. Conclusions and way forward

This initial version of the MainstreamBIO DMP aims at safeguarding the sound management of the data collected, processed and/or generated during the project's activities across their entire lifecycle, while also making them FAIR. It describes all the underlying processes of the MainstreamBIO data management, collection, process and generation, in accordance with the GDPR guidelines, and sheds light on (i) the data being collected, processed, generated and/or re-used under the project activities, (ii) the specific objectives under which each dataset is collected, processed, generated and/or re-used, (iii) the management of the other research outputs of the project (iv) the allocation of resources and data management responsibilities and (v) the data security and ethical aspects of the data.

In the framework of MainstreamBIO, the DMP is a living document and is updated throughout the course of the project, considering its latest developments and available results. It is expected to be further developed and updated at least twice by the end the project (i.e., as D6.3 by M18 and as D6.4 by M34). If necessary, additional ad hoc updates may be released in order to include new data, better detail and/or reflect modifications in the methodologies applied or other aspects relevant to data management (such as costs for making data FAIR, size of data, etc.), changes in consortium policies and plans or other potential external factors.

## 9. Annexes

### 9.1 Annex I – Privacy policy

#### PRIVACY POLICY

##### 1. Who we are:

MainstreamBIO is a coordination project funded by the European Union's Framework Programme for Research and Innovation Horizon Europe. MainstreamBIO aims at contributing towards bringing small-scale bio-based solutions into the mainstream across rural Europe. To achieve this, the project is set to greatly enhance cooperation between key bioeconomy stakeholders, resulting in sustainable business models pathways for bio-based innovations in rural areas. Along these lines, the project follows an integrated methodology to establish regional multi-actor structures for demand-driven innovation, and deliver a combination of communication materials, training programmes, events, decision support system and other practical digital tools packed in the MainstreamBIO Toolkit.

The partners of the MainstreamBIO consortium, listed below, process certain types of personal data for the purposes of the project. Each partner is responsible for the personal data they collect and process during their activities under the framework of the project:

- Q-PLAN INTERNATIONAL ADVISORS PC, Greece (Coordinator), <https://qplan-intl.gr/>
- MUNSTER TECHNOLOGICAL UNIVERSITY, Ireland, <https://www.mtu.ie/>
- STICHTING WAGENINGEN RESEARCH, Netherlands, <https://www.wur.nl/en.htm>
- INSTYTUT UPRAWY NAWOZENIA I GLEBOZNAWSTWA, PANSTWOWY INSTYTUT BADAWCZY, Poland, <https://www.iung.pl/>
- RISE PROCESSUM AB, Sweden, <https://www.ri.se/en/processum>
- AGRAREN UNIVERSITET – PLOVDIV, Bulgaria, <https://www.au-plovdiv.bg/en/>
- FBCD AS, Denmark, [www.foodbiocluster.dk](http://www.foodbiocluster.dk)
- EURIZON SL, Spain, <https://innovarum.es/es/inicio/>
- DRAXIS ENVIRONMENTAL SA, Greece, <https://draxis.gr/>
- WHITE RESEARCH SPRL, Belgium, <https://white-research.eu/>

For further information, we can be contacted at: [www.mainstreambio-project.eu](http://www.mainstreambio-project.eu)

## 2. How we collect your personal data

We collect personal data both directly and indirectly:

**Directly.** We obtain personal data directly from individuals in a variety of ways, including but not limited to the following cases:

- an individual subscribes to our newsletter/s;
- an individual registers to attend meetings and events we host and during attendance at such events;
- we establish cooperative relationships with an individual;
- we provide professional services pursuant to our contract with the European Commission;
- an individual participates in an interview or survey organized by us.

**Indirectly.** We obtain personal data indirectly about individuals from a variety of sources, including:

- our research partners;
- our networks and contacts;
- public and open data sources such as public registers, news articles and internet searches;
- social and professional networking sites (e.g., LinkedIn).

## 3. What types of data we collect?

We only collect the data that are necessary for the smooth implementation of our project. These data fall into the following categories:

- **contact details** (name/ surname, e-mail address, street address, mobile phone number, land line phone number);
- **professional information** (job title, organization, field of expertise);
- **demographics** (e.g., age, gender, nationality);
- **information about what a person knows or believes.**
- **videos and photos** (from people that attend our events).

## 4. Bases of lawful processing

We process personal data on the following legal bases:

Legal obligations - for processing activities required for compliance both with applicable national and European legislation as well as with the specific legal and regulatory framework of the Horizon Europe Framework Programme for Research and Innovation of the European Union.

Consent – for processing activities such as organization of surveys and interviews, completing of questionnaires and dissemination of project's results.

Contractual obligations - for processing activities such as reporting to the European Commission and complying with project's publicity obligations.

## 5. What we do with your personal data

We process your personal data with the purpose of:

- Conducting research (e.g., interviews, surveys);
- Dissemination our project's results to different types of stakeholder;
- Sending invitations and providing access to guests attending our events and webinars;
- Administering, maintaining, and ensuring the security of our information systems, applications, and websites;
- Processing online requests or queries, including responding to communications from individuals;

- Complying with contractual, legal, and regulatory obligations.

## **6. How we secure your personal data when we process it**

We continuously apply a personal data risk assessment process to identify, analyse, and evaluate the security risks that may threaten your personal data. Based on the results of this risk assessment, we define and apply a set of both technical and organizational measures to mitigate the above security risks, including but not limited to:

- Data Protection Policies to guide our personnel when processing your data;
- Written contracts with organizations that process personal data on our behalf;
- Non-Disclosure Agreements with our personnel;
- Back up process, antimalware protection, access control mechanisms, etc.
- Some of our partners have appointed a Data Protection Officer.

## **7. Do we share personal data with third parties?**

We may occasionally share personal data with trusted third parties to help us deliver efficient and quality services. When we do so, we ensure that recipients are contractually bound to safeguard the data we entrust to them before we share the data. We may engage with several or all the following categories of recipients:

- Parties that support us as we provide our services (e.g., cloud-based software services such as Dropbox, Microsoft SharePoint, Google);
- Our professional advisers, including lawyers, auditors, and insurers;
- Dissemination services providers (e.g., MailChimp);
- Law enforcement or other government and regulatory agencies or other third parties as required by, and in accordance with applicable law or regulation;
- The European Commission according to our relevant contractual obligations.

## **8. Do we transfer your personal data outside the European Economic Area?**

We do not own file servers located outside the European Economic Area (EEA). However, some partners may use cloud and / or marketing services from reputable providers such as SharePoint, DropBox, MailChimp, Google, etc., situated both inside and outside the EEA. We always check that such providers comply with the relevant GDPR requirements before start using their services.

## **9. Do we use cookies?**

Our websites use cookies. Where cookies are used, a statement will be sent to your browser explaining the use of cookies. To learn more, please refer to our cookie policy.

Our websites use cookies. Where cookies are used, a statement will be sent to your browser explaining the use of cookies. Cookies are small text files which are saved on your computer, mobile phone or tablet. They allow the website to remember your actions and preferences (such as login, language, font size and other display preferences) so you don't have to keep re-entering them whenever you come back to the site. You can control and/ or delete cookies as you wish. If you do this, however, you may need to manually adjust your preferences every time you visit a site. For more information on how to manage cookies, please visit: <http://www.aboutcookies.org/>

We use tools like Google Analytics to better understand how visitors interact with our website. This provides us with important information to enable the site to work better. The information collected is not linked to your personal data. For more information on the cookies set by Google Analytics, please visit: <http://code.google.com/apis/analytics/docs/concepts/gaConceptsCookies.html>

The following cookies are used by Google Analytics:

Name	Typical content	Cookie expires after
_ga	Used to distinguish users	2 years
_gat	Used to throttle request rate	1 minute
_gid	Used to distinguish users	24 hours

## 10. Your rights

You have the following rights regarding our processing of your personal data:

- **Right to withdraw consent** – You can withdraw consent that you have previously given to one or more specified purposes to process your personal data. This will not affect the lawfulness of any processing carried out before you withdraw your consent.
- **Right of access** – You can ask us to verify whether we are processing personal data about you and, if so, to have access to a copy of such data.
- **Right to rectification and erasure** – You can ask us to correct our records if you believe they contain incorrect or incomplete information about you or ask us to erase your personal data after you withdraw your consent to processing or when we no longer need it for the purpose it was originally collected.
- **Right to restriction of processing** – You can ask us to temporarily restrict our processing of your personal data if you contest the accuracy of your personal data, prefer to restrict its use rather than having us erase it, or need us to preserve it for you to establish, exercise or defend a legal claim. A temporary restriction may apply while verifying whether we have overriding legitimate grounds to process it. You can ask us to inform you before we lift that temporary processing restriction.
- **Right to data portability** – In some circumstances, where you have provided personal data to us, you can ask us to transmit that personal data (in a structured, commonly used, and machine-readable format) directly to another entity.
- **Right to object** – You can object to our use of your personal data for direct marketing purposes, including profiling or where processing has taken the form of automated decision-making. However, we may need to keep some minimal information (e.g., e-mail address) to comply with your request to cease marketing to you.
- **Right to make a complaint to your local Data Protection Authority (DPA)** (see [https://ec.europa.eu/justice/article-29/structure/data-protection-authorities/index\\_en.htm](https://ec.europa.eu/justice/article-29/structure/data-protection-authorities/index_en.htm)) regarding any concerns you may have about our data handling practices.

To ask us to do anything of the above, you can contact us by email: [info@mainstreambio-project.eu](mailto:info@mainstreambio-project.eu). We will promptly examine your request against the relevant requirements of the laws and regulations governing privacy and personal data protection and we will answer the latest within 30 days after receiving your request. We will ask from you some kind of identification (e.g., photocopy of your identity card or passport) to avoid non-authorized reveal of your personal data. If, for reasons of complexity of the request or a multitude of requests, we are unable to respond promptly, we will notify you within 30 days of any delay, which in no case may exceed two months from the expiration of the 30-day deadline.

### **11. How long do we retain personal data?**

We retain personal data to provide our services, stay in contact with you and to comply with applicable laws, regulations, and contractual obligations to which we are subject. Please note that we have an obligation to retain data concerning projects funded by the Horizon Europe Framework Programme for Research and Innovation of the European Union for up to five years after the end of the project (unless further retention is requested by auditors). After the expiry of the retention period, and unless further legitimate grounds for retention arise, we will dispose of personal data in a secure manner.

### **12. Disclaimer of liability for third party websites**

Although our site may contain links to third-party sites, including the sites of the consortium partners, we are not responsible for the privacy practices or content of these sites and we expressly disclaim any liability for any loss or damage that may be caused by the use of these links. We do not monitor the privacy practices or the content of these sites. If you have any questions about the privacy practices of another site, you should contact the site's responsible personnel. We suggest you read the privacy policy of each website you interact with, before allowing the collection and use of your personal data.

We may also provide social media features that allow you to share information on your social networks and interact with our project on various social media sites. The use of these social media features may result in the collection or sharing of information about you. We recommend that you check the privacy policies and regulations of the social networking sites you interact with, so that you can be sure that you understand what information may be collected, used and disclosed by these sites.

### **13. Children**

We do not knowingly collect, use, or disclose information from children under the age of 16. If we learn that we have collected the personal information of a child under 16, we will take steps to delete the information as soon as possible. Please immediately contact us if you become aware that a child under 16 has provided us with personal information.

### **14. Revisions of this Privacy Policy**

This Privacy Policy is valid from 30/11/2022 and replaces any other previous notifications that we had issued in the past regarding our personal data management practices. We reserve the right to revise this Policy at any time. The current version will be always uploaded to our website indicating the date of entry into force, so you know when the most recent revision took place. If there are critical changes in this policy or our personal data practices change significantly in the future, we will notify you by posting the changes on our website.

## 9.2 Annex II – Informed Consent Form

# Text in red colour contains guidelines for adjusting this template and should be deleted.

# Text in grey colour contains examples and should be adjusted to the context of each activity.

# Text included in < > and/or highlighted with yellow should be replaced with content that is suitable to the context of each activity & project as well as to the organisation seeking to obtain the consent.

# Before using this template take the time to carefully read and adjust it to the needs of the activity at hand as well as to any relevant regulations and particularities applicable to your country and organisation.

### INFORMED CONSENT FORM

#### Who we are:

We are < Insert Partner Name > and we are contacting you in the framework of MainstreamBIO a project funded by the European Union under the Horizon Europe Framework Programme for Research and Innovation. A detailed description on how MainstreamBIO handles personal data is presented in the project's Privacy Policy available through the project's web page ([www.mainstreambio-project.eu](http://www.mainstreambio-project.eu)).

#### Project:

**MainstreamBIO** – MAINSTREAMing small-scale BIO-based solutions across rural Europe via regional Multi-actor Innovation Platforms and tailored innovation support (GA Number 101059420).

#### Partner:

Organisation name: < Insert Partner Name >

Address: < Insert Partner Address >.

Phone: < Insert Partner Phone >.

E-mail: <Insert Partner Generic E-mail Address >

#### Responsible persons:

# You may delete the line referring to the Data Protection Officer if your organisation does not have one.

#	Role	Name	E-mail
1	MainstreamBIO Project Manager	<Insert name of project manager from your organisation>	<Insert e-mail of project manager from your organisation >
2	Interviewer	<Insert name of interviewer from your organisation >	<Insert e-mail of interviewer from your organisation >
3	Data Protection Officer	<Insert name of DPO from your organisation >	<Insert e-mail of DPO from your organisation >

### **What do we need from you?**

# Please explain in a brief paragraph (4-5 lines) the activity and its purpose under the frame of the project.

*Example: We need you to participate in an interview that will be carried out by MainstreamBIO with a view to: identify and analyze farmers' and rural communities' needs, barriers and challenges to uptake and/or scale up small-scale bio-based solutions as well as to capture awareness levels and perceptions regarding the bioeconomy and bio-based solutions, products and nutrient circularity practices.*

The interview is expected to last for no more than **< Insert number of minutes >** minutes. We will take written notes and we will be making a sound recording of the interview.

# Please adapt the following text to accurately depict the type of personal data to be collected.

To effectively conduct this interview, we need to process some of your personal data:

- Your contact details (full name, email, phone number);
- Some basic demographics (age, gender);
- Your professional info (organization, job position, field of expertise);
- Your education info
- Your opinions on the subject matter.

### **Why do we need your data & what will we do with them?**

We need your data to contact you in order to plan and carry out the aforementioned interview and to resolve any ambiguities, questions and other issues that may arise after and as a result of the interview. We also need to record your data to keep track of the interview process. The project's deliverables that will be derived by the interview will not include your personal data or any other information that could identify you. Your personal data will remain on our written notes (interview's transcript) and the sound recording we will make during the interview.

We will share your data with a few other MainstreamBIO project partners that are also involved in this task and will participate in the drafting of the relevant deliverables. We are also obliged to grant access to your data to:

- EU officials such as our Project Officer for purposes related to project's evaluation;
- EU agencies and other authorities for project's auditing purposes.

We would also be very happy if you gave us your consent to contact you in the future to ask you to participate in other project's activities (e.g., surveys, interviews, project events etc.) and also to inform you about the project's progress (e.g., by sending you a newsletter or similar messages).

### **How can you withdraw your consent?**

You should know that you can withdraw your consent at any time by communicating either on the phone or by email with the responsible persons listed in the previous page. With regards to the informational messages and newsletters you can always opt out by simply clicking the link "Unsubscribe" or something similar included at the end of all the relevant messages.

**I hereby give my consent to the processing of my personal data needed for:**

*(Please, tick the boxes below to confirm that you give us your consent for the respective subject. Any boxes left unticked mean that **you do not consent to the relevant subject.**)*

#	Consent Subject	Tick box
1	My participation in an interview that will be carried out by MainstreamBIO to < insert key objective of the interview >	
2	My participation in future activities of MainstreamBIO	
3	Receiving newsletters and messages regarding MainstreamBIO activities

## 9.3 Annex III – Data Subject Request Form

# Text in red colour contains guidelines for adjusting this template and should be deleted.

# Text included in < > and/or highlighted with yellow should be replaced with content that is suitable to the context of each activity & project as well as to the organisation seeking to obtain the consent.

### Data Subject Request form

# You may delete the data referring to the Data Protection Officer if your organisation does not have one.

#### CONTACT

<Insert name of responsible Project Manager>	<Insert name of DPO > (Data Protection Officer)
<Insert email of responsible Project Manager>	<Insert e-mail of DPO >

## DATA SUBJECT REQUEST FORM

This form should be used to submit a data subject request under the provisions of the European Union General Data Protection Regulation (GDPR).

### Submitter Details

<b>Title:</b>	
<b>Name:</b>	
<b>Address:</b>	

### TYPE OF REQUEST

Please select the type of request you are making:

- Consent Withdrawal*
- Access request*
- Rectification of personal data*
- Erasure of personal data*
- Restriction of processing of personal data*
- Personal data portability request*
- Objection to processing of personal data*
- Request regarding automated decision making and profiling*

## PERSONAL DATA INVOLVED

## REQUEST DETAILS

## REQUEST REASON/JUSTIFICATION

**Name:** .....

**Signature:** .....

**Date:** .....

\*\*\*

Once completed, this form should be submitted via e-mail to **< Insert contact e-mail of Partner >** or posted to:

**< Insert Partner Name >**

**< Insert Partner Address >**

## 9.4 Annex IV - Record of Processing Activities

No	Project Activity / purpose	Data processing activity	Linked WP(s)	Linked Tasks	Data subjects	Data source	Data category(-ies)	Responsible partner	Involved partner(s)	Type of involvement	Special category (Art. 9 GDPR)	Lawfulness of processing	Transfer to third countries (non EU-EEA)	Transfer to EU from third countries	Recipients	Comments

**MAINSTREAM BIO**  
MAINSTREAMING SMALL-SCALE BIO-BASED  
SOLUTIONS ACROSS RURAL EUROPE

## The project

MainstreamBIO is a Horizon Europe EU funded project, which sets out to get small-scale bio-based solutions into mainstream practice across rural Europe, providing a broader range of rural actors with the opportunity to engage in and speed up the development of the bioeconomy. Recognizing the paramount importance of bioeconomy for addressing key global environmental and societal challenges, MainstreamBIO develops regional Multi-actor Innovation Platforms in 7 EU countries (PL, DK, SE, BG, ES, IE & NL). The project aims to enhance cooperation among key rural players towards co-creating sustainable business model pathways in line with regional potentials and policy initiatives. MainstreamBIO supports 35 multi-actor partnerships to overcome barriers and get bio-based innovations to market with hands-on innovation support, accelerating the development of over 70 marketable bio-based products and services. Furthermore, the project develops and employs a digital toolkit to better match bio-based technologies, social innovations and good nutrient recycling practices with available biomass and market trends as well as to enhance understanding of the bioeconomy with a suite of educational resources building on existing research results and tools. To achieve these targets, MainstreamBIO involves 10 partners across Europe, coming from various fields. Thus, all partners combine their knowledge and experience to promote the growth of bioeconomy in a sustainable and inclusive manner.
